Your guide to the catalogue

ACCESSORIES INCLUDED

Under this heading a specification is given for each type of tool and of the parts (nipples, keys, guards, etc.) supplied with the tool. Instructions and a list of spare parts are always included in the package.

OPTIONAL ACCESSORIES

Here you will find the specifications for most of the accessories. They are dependent on the job the tool is to be used for and have to be ordered separately.

AIR CONSUMPTION

The air consumption of the tools is stated in liters per second, l/s, and relates to free air, i.e., the compressed air expanded to atmospheric pressure. Unless otherwise stated, the figures are valid at a working pressure of 6.3 bar and indicate the maximum air consumption.

Maximum air consumption is valid for the tool without a speed governor when idling, i.e., when the tool is running at no load. A tool with a speed governor, has the maximum air consumption at the maximum power output.

SPEED

The tool speeds are indicated in revolutions per minute, r/min, and indicate the idling speed, i.e., the speed at which the tool runs at no load and at a working pressure of 6.3 bar, if not otherwise specified. The speed at max. output is 50% of the idling speed for tools without a speed governor and 80 – 90% of the idling speed for tools with a speed governor.

SELECTED SERVICE KITS TO ORDER

Under this heading, service kits for the most frequent service jobs done on the tool in question are listed.

VIBRATION AND NOISE EMISSION

Vibration values referring to the ISO 28927 are always given as a measured vibration value and an uncertainty. The uncertainty is an indication of the spread in the vibration when measured. The spread in the in-use vibration emitted in a real work situation is at least of the same magnitude, often considerably bigger.

Vibration values referring to ISO 28927 can in many cases also be used as rough estimates of the in-use vibration values when tools are used in typical applications.

In-use vibration is influenced by factors beyond our control such as poor maintenance, pirate parts, unbalanced grinding wheels, etc.

When measuring noise, Atlas Copco uses the standard ISO 15744. The figure given in this catalogue is the measured sound pressure level. If the measured value exceeds 80 dB(A), the sound power level is

also given. The standards describe how to calculate this figure. The uncertainty in the figures from variations in the test method and production is 3 dB(A). In-use noise values close to the operator's ear may differ considerably from the given values particularly since in many applications the sound from the process is higher than the unloaded tool noise.

We, Atlas Copco Tools AB, cannot be held liable for the consequences of using the declared values, instead of values reflecting the actual exposure, in an individual risk assessment in a workplace situation over which we have no control. We recommend a program of health surveillance to detect early symptoms which may relate to noise or vibration exposure, so that management procedures can be modified to help prevent future impairment.

For vibration and noise emission values to our products go to:

Introduction – Pneumatic Assembly Tools

Fast, accurate and operator friendly

Atlas Copco supplies a broad range of pneumatic assembly tools designed to give you highest possible productivity on your assembly line. The result of decades of development, the tools include ergonomically designed screwdrivers, pulse tools, nutrunners and impact wrenches, that offer superior productivity. High productive tools means less air consumption that translates into big energy savings since energy consumption and CO₂ emissions are reduced. Vibration and noise levels are minimized, power-to-weight ratios are high. It all adds up to maximum operator comfort and highest individual productivity.

IMPACT WRENCHES (LMS)

Impact wrenches have unmatched speed and power-to-weight characteristics, which makes them ideal e.g. for loosening applications. They productify raw power and cover a wide torque range including both non shut-off and shut-off models. They are also reaction free.

IMPULSE TOOLS (ERGOPULSE PTI, XS, PTS, PTX)

Impulse tools are the ideal choice for fast and reaction-free one-hand tightenings. They have the same advantages as impact wrenches but with higher accuracy. In addition you will get a tool with good ergonomics, which means lower sound levels and less vibrations. Pulse tools also have a longer service life. They come in non shut-off and shut-off version.

SCREWDRIVERS

We offer a wide range of extremely accurate, ergonomically designed screwdrivers for all kinds of jobs involving smaller screw sizes, up to M6. All models are lubrication-free.

- **Direct drive (LUD, LUF, HRD)**

The low cost alternative for wood and self-drilling screws.

- **Slip clutch (TWIST, LUF)**

Best for sheet metal screws, wood screws or self-tapping screws.

- **Shut-off control (LUM)**

Best practice in most cases, especially for machine screws and screws in plastic. Very good accuracy and lowest bit consumption.

NUTRUNNERS

Suitable for all kinds of tightening tasks from 0.5 Nm, nutrunners in Atlas Copco's extensive range are extremely accurate. Due to their ergonomic designs they are also very comfortable to operate. All models are lubrication-free.

- **Angle and straight type (LTV, LTD)**

Accurate workhorses for limited spaces suitable for high volume serial production. Very good accuracy, small angle head and possible to attach special heads. Low noise and vibration levels.

- **Pistol grip type (LMP, LTP)**

High torque tools for super fast, accurate tightenings. Low noise, and low vibration tools for operator comfort.

RTP NUTRUNNERS

Whatever your industry, if your operations include loosening or tightening heavy duty bolts, Atlas Copco's slim, lightweight RTP pneumatic nutrunner can help increase your productivity.

Among the smallest on the market, the RTP's slim gearpack gives you effortless access to bolts in cramped spaces. Tightening accuracy and repeatability are high. Noise and vibration levels are lower than in traditional impact wrenches.

TORQUE RECOMMENDATIONS

The torque is important to ensure the required clamping force. The table shows the recommended max tightening torque for the most common types of screws and bolts: untreated, oil-smear screws (friction coefficient = 0.125) with metric coarse thread. The torque corresponds to approximately 62% of tensile stress.

M-threaded screws/bolts Tightening torque Nm, according to ISO 898/1

Thread	Bolt grade						Thread	Bolt grade

High accuracy, good ergonomics

Atlas Copco pneumatic screwdrivers bring accuracy and good ergonomics into the production process, while offering robust, reliable designs. The range includes models to fit any low torque application. The tools are available in pistol grip, angle and straight configurations with drive types spanning a wide range of speeds and torques.

In this range of pneumatic screwdrivers, the proven and patented Atlas Copco clutch design gives high torque accuracy and repeatable results over time. All screwdrivers are lightweight, with optimum non-slip grip and handle design for operator comfort. A fast shut-off clutch give minimum reaction impulse, thus reducing operator strain. All Atlas Copco screwdrivers can be used as lubrication-free.

A COMPLETE RANGE

Our pneumatic screwdrivers are available in pistol grip, angle and straight configurations. The LUM, TWIST, LUF and LUD models are pistol grip and straight tools, and the LTV is an angle tool.

SHUT-OFF TYPE SCREWDRIVERS

LUM and LTV models have a fast and accurate shut-off clutch for smooth performance and high quality tightening. They are suitable for joints with demands on torque accuracy, providing accurate tightening time-after-time, independent of variations in joint stiffness. Electro Static Discharge (ESD) approved models and RE models are available in this range. RE models enable a signal to be received from the tool, in order to control batch count. All RE models need to be combined with an external RE control system. Shut-off tools are the best choice for machine screws, thread-rolling screws and thread-forming screws for plastic.

SLIP CLUTCH TYPE SCREWDRIVERS

TWIST and LUF HR screwdrivers have a slip clutch that applies a pulsating force when the torque level is reached. These tools are suitable where the torque level may temporarily rise during the rundown phase, for instance when using sheet metal screws, wood screws or self-tapping screws.

DIRECT DRIVE TYPE SCREWDRIVERS

LUD and LUF HRD are direct drive screwdrivers that stall when final torque is reached. The torque level is adjusted by regulating the air pressure. LUD and LUF HRD are mainly used for self-drilling and wood screws.

*With optional spring.

Ordering No. 4210 1831 00

The LUM pistol grip range comes in several different configurations:

- HR: Model with traditional-grip can be used with high grip when feed force is needed or with low grip for minimal reaction force.
- HRX: Model with balanced grip perfectly balanced for standard pistol grip applications.
- HRF: Balanced grip with multiple air inlets for flexible connection.
- The LUM32 model has the highest force to weight ratio amongst the pneumatic screwdrivers. It is also a tool with low reaction force and fast shut-off because of the position of the clutch.

RE reporting models are available, designated with suffix -RE.

^a 1/4" square drive.

All models: Are reversible and have quick change chuck.

All data at an air pressure of 6.3 bar.

For operator comfort a support handle is recommended for high torque, see Optional Accessories.

Pistol Grip Models

Direct Drive

The LUD and LUF pistol grip range comes in several different configurations:

- HR/HRD: Model with traditional-grip can be used with high grip when feed force is needed or with low grip for minimal reaction force.
- HRX: Models with balanced grip are perfectly balanced for standard pistol grip applications.

COMBI34 HR16	4.0-8.0	35-71	1600	1.0	2.2	179	20	9	19	10	1/4

All models: Are reversible.

Are equipped with a 1/4" female hexagon drive for bits.

Combi-tools are delivered with drill chuck and 1/4" female hex drive for bits.

Torque range is reached by adjusting the air pressure between minimum 3 bar and maximum 6 bar.

The TWIST and LUF pistol grip range comes in several different configurations:

- HR: Model with traditional-grip can be used with high grip when feed force is needed or with low grip for minimal reaction force.
- HRX: models with balanced grip are perfectly balanced for standard pistol grip applications.
- HRF: Balanced grip with multiple air inlets for flexible connection.

Straight Models

Shut-off

Straight screwdrivers should be used with a torque arm for best ergonomics.

LUM straight screwdrivers come in two different configurations:

- PR: Model with push-to-start function and reverse button.
- SR: Model with lever start function and reverse ring.

RE reporting conversion kits are available for SR models, see accessory page.

Soft stop options are available, designated with the suffix -SS.

LTV angle screwdriver models have a fast, accurate shut-off clutch and are designed for durability.

- Slim design of the angle head allows good access in limited spaces and awkward positions.
- Spiral cut gears give high accuracy.

RE reporting conversion kits are available for LTV screwdriver models. For kit, see accessory page.

Power you can depend on

Atlas Copco impact wrenches are designed to provide dependability and a long, trouble-free service life in the toughest conditions. Few other tools can match the Atlas Copco impact wrench when it comes to flexibility, capacity-to-weight ratio and simplicity in use and maintenance.

Atlas Copco's powerful, high-speed impact wrenches are designed to cut production times by providing rapid run-down and fast tightening. Impact wrenches build up torque in joints through a series of rotary impacts, where air pressure and tightening time affect the torque obtained. As a general rule, if a wrench impacts longer than 5 seconds on a fastener, a larger wrench should be used in order to achieve better durability.

The LMS models are non shut-off, which means they will shut off once the operator releases the trigger.

LMS

The LMS is a non shut-off impact wrench with extraordinary power to weight qualities and virtually no reaction force during tightening. The torque is applied to the joint, not to your wrist.

These tools are typically used where fast tightening or disassembly is needed and the range covers recommended torque levels between 7-5500 Nm.

LMS 8-SERIES

The LMS 8-series impact wrenches delivers true raw power and enables extremely fast tightening and loosening.

The innovative and unique Grease Retaining System ensures maximum tool performance with long service intervals.

MINIMUM WEAR AND LOW VIBRATIONS

Each part of the durable LMS8-Series impact mechanism is produced with a very precise accuracy. This allows the maximum amount of energy to be generated in each impact. It also minimizes wear, vibration and strain on the operator.

The torque figures are normal tightening torque for untreated oil-smeared and rust-protected bolts and nuts in the most common strength grades. The torque figures correspond to approximately 63% of tensile stress.

LMS MODELS

- Recommended operating range 7-1800 Nm.
- Fast tightening and disassembly.
- Negligible reaction force.
- Low weight.
- High power-to-weight ratio.
- Tightening time should not exceed 5 seconds, to avoid excess wear on the tool.
- Soft-start throttle.
- Long service intervals.
- Durable high performance with Grease Retaining System.

ErgoPulse impulse tools – fast, reliable and operator friendly

The speed, reliability, and accuracy of ErgoPulse hydraulic impulse nutrunners, combined with the fact that they are comfortable to operate, make them suitable for continuous heavy production. Since there is no metal-to-metal impact in a pulse tool, it provides a softer, more controlled pulse with considerably less vibration and noise than an impact wrench.

A COMPLETE RANGE

ErgoPulse impulse tools are available in straight and pistol grip, shut-off and non shut-off, as well as high- and low pressure versions. The range covers torque from 2–450 Nm.

The ErgoPulse principle – The heart of a pulse tool is the hydraulic pulse unit. Since the pulses are very short, there is almost no reaction force in the handle, only the much lower motor torque is transferred to the operator's hand. In addition, there are less vibrations and noise than with an impact wrench. Combined with good balance and low weight the result is a tool that is very comfortable to operate.

Atlas Copco offer both shut-off and non shut-off tools. The shut-off pulse tools shut off the air supply when the pre-set torque is been reached. Operator influence is minimized and the result is increased accuracy and faster tightening. The torque is "sensed" by means of a rotatable inertial mass acting against an adjustable spring. The result is a highly accurate and easily adjustable shut-off system. Non shut-off tools are operator dependent and preferred when the goal is to have a process controlled by the operator.

ERGOPULSE PTI TOOLS

Our newest addition in the ErgoPulse shut-off tool range is the PTI. With the redesigned pulse unit technology DuraPulse® up-time of the tool is increased up to five times. It also offers the highest accuracy of all ErgoPulse tools as it's equipped with a more fine tuned shut-off mechanism. There is no need to choose between Trim and Autotrim function; the Multitrim function enables the use of both in the same tool, thus reducing meanshift on different types of joints.

With growing demands of increased production rate, the new TorqueBoost® technology creates faster torque build

up to reduce time per production unit. As per Atlas Copco standard, this tool is well balanced and created with superior ergonomics for maximum operator comfort in mind. The handle is designed for conventional use, and for use upside down. Available in a torque range from 8–150 Nm (6–110 ft lb) and in both high - and low pressure versions, the ErgoPulse PTI fills the needs of most applications requiring a pulse tool.

ERGOPULSE PTS AND PTX TOOLS

Pulse mechanism – The pulse mechanism of the shut-off tools (including PTI) has pistons for minimum weight and long service life. The design is based on cam-guided pistons and rollers and the pulse cylinder is oil-filled. The moving parts are thus completely immersed in oil, which ensures a long service life.

Twin chamber vane motor – This is designed to give high torque at low speed, which gives the best characteristics for fast, accurate tightening.

TRIM valve – A patented adjustable valve at the air outlet is used to maximize tool accuracy on one type of joint, which could be hard, medium or soft.

AUTOTRIM valve – PTS/PTX-AT tools are equipped with an automatic two-stage trim valve. The tool runs down the screw with reduced free speed. After 1-2 pulses it shifts automatically to full power thus enabling both hard and soft joints to be tightened with excellent results without any adjustments.

The tools are available in both Trim and AutoTrim versions.

ERGOPULSE XS TOOLS

The XS non shut-off tool is the correct choice when the operator needs to control the process. The tools provide high torque, fast, accurate tightening and long service lifetimes.

Twin chamber vane motor – This is designed to give high torque at low speed, which provides the best characteristics for fast, reliable and accurate tightening.

Double or triple bladed pulse mechanisms – The tools are equipped with pulse units with two or three blades. They employ the Atlas Copco patented cam-guided design to push out the blades, giving very high reliability. The pulse units have a high power-to-weight ratio, making the tools very powerful for their size. Torque is adjusted by regulating an artificial leak in the hydraulic circuit.

Selection Guide

EP PTI/PTS/PTX SHUT-OFF MODELS

The ErgoPulse PTI, PTS and PTX tools can be adjusted within a wide torque range by simply setting the spring force that counteracts the inertia body. Torque should preferably be checked with a hand torque wrench. Electronic monitoring with an in-line transducer is possible but should be verified with a manual hand torque wrench to avoid measuring errors due to the extremely short pulse sequence.

EP XS/PS NON SHUT-OFF MODELS

The size of tool is determined on the basis of torque and/or bolt dimension. Torque should preferably be checked with a hand torque wrench. Electronic monitoring with an in-line transducer is possible but should be verified with a manual hand torque wrench to avoid measuring errors due to the extremely short pulse sequence.

EP PTI MODELS

The unique design of the ErgoPulse PTI shut-off hydraulic impulse tools brings pulse tool performance up to a level never experienced before.

PTI is our new generation of pulse tools offering superior uptime, ergonomics and productivity.

- TorqueBoost® for faster tightenings.
- MultiTrim® function integrated in tool.
- DuraPulse® technology allows for up to 5 times longer use before maintenance is required.
- Separate RE-port integrated in all tool models.
- High level of durability.
- Well balanced with superior ergonomics.
- New handle shape enabling tool use upside down.
- High speed, short cycle times.
- High power-to-weight ratio.
- No reaction forces.
- Low noise levels.
- Lubrication free.

^aTo be used as a guide only, final torque depends on type of joint, accessories used and air pressure.

^bIn full speed mode.

^dAir pressure 4 bar / 58 psi.

^cAir pressure 6.3 bar / 91 psi.

NOTE: Protective cover is included for every tool.

EP PTX MODELS

In ErgoPulse shut-off tools the air supply is shut off as soon as the pre-set torque has been reached, minimizing operator influence. The result is increased accuracy and faster tightening.

- High reliability.
- Consistent torque over time, low mean-shift.
- High level of durability.
- High speed, short cycle times.
- One-handed operation.
- High power-to-weight ratio.
- No springs to wear out.
- No wear on key parts.
- High precision components.
- No reaction forces.
- Light, well-balanced tools.
- Low noise levels.
- Lubrication free.

^d In full speed mode.

Pistol Grip Models

Non Shut-off

EP XS MODELS

In ErgoPulse non shut-off tools the tool produces pulses until the operator releases the trigger. Preferred in applications where it is an advantage for the operator to be able to control the process by shutting off the tool manually.

- High reliability and durability.
- High speed, short cycle times.
- One-handed operation.
- High power-to-weight ratio.
- No springs to wear out.
- High precision components.
- No reaction forces.
- Light, well-balanced tools.
- Low noise levels.
- Lubrication free.

^a To be used as a guide only, final torque depends on type of joint, accessories used and air pressure.

^d With TRIM valve fully open.

^e Air pressure 4 bar / 58 psi.

^b Female hexagon drive. Quick change chuck.

^c In full speed mode.

Straight Models

Non Shut-off

XS MODELS

In ErgoPulse non shut-off tools the tool produces pulses until the operator releases the trigger. Preferred in applications where it is an advantage for the operator to be able to control the process by shutting off the tool manually.

- High reliability and durability.
- High speed, short cycle times.
- One-handed operation.
- High power-to-weight ratio.
- No springs to wear out.
- No wear on key parts.
- High precision components.
- No reaction forces.
- Light, well-balanced tools.
- Low noise levels.
- Lubrication free.

User-friendly tools offering power, speed and accuracy

The tools in Atlas Copco's broad range of pneumatic nutrunners offer a superior combination of power, speed and accuracy. With their advanced ergonomic designs, they are also extremely user-friendly and will contribute to raising productivity in a wide range of applications in your assembly plant.

Tools in Atlas Copco's range of pneumatic nutrunners are divided into three main categories: Angle, straight and pistol grip versions. These are also available in optional models, such as crowfoot, hold-and-drive, and flush socket.

THE POWER TO RAISE PRODUCTIVITY

The high power output provided by Atlas Copco nutrunners is decisive for productivity, i.e., the combined performance of operator and tool. The tools are set at the optimal speed for every torque capacity rating. The balance between speed and clutch response gives high accuracy, ensuring torque repeatability, regardless of joint characteristics.

COMFORTABLE TO WORK WITH

Our pneumatic nutrunners live up to Atlas Copco's reputation for developing tools with good ergonomics. Low tool weights, thermally insulated grips and low noise and vibration levels all help to reduce operator fatigue and raise individual productivity in your plant.

Simplicity in selection and installation allow you to set the torque once and that is the torque you will get, joint after joint, without complicated analyses.

CHOOSING THE RIGHT TOOL IS EASY

No joint is too complicated for a nutrunner. To set the torque, just adjust it to the required level, regardless of joint conditions.

Introduction – Angle Nutrunners

A new angle on productivity

The LTV 9-2 and LTV 8 angle nutrunner range from Atlas Copco successfully combines two key performance factors – speed and accuracy. Consistently accurate, high-speed tightening is complemented by advanced ergonomic design, ensuring an unmatched level of productivity. All this is presented in a tool that is very easy to handle.

Angle nutrunners from Atlas Copco are certified for accuracy and durability by major car manufacturers. They are easy to choose, easy to set, and easy to operate.

ACCURATE EVERY TIME

Hard or soft joint? You don't need to think about it. The tool gives the torque you install, independent of joint variations and variations in air pressure and lubrication. The clutch shuts off at the same torque, tightening after tightening.

HIGHEST PRODUCTIVITY

Instant disengagement of the clutch keeps torque over-shoot to a minimum even on the fastest tools. Our new models were developed to meet the most extreme requirements on operational speeds.

As always, we kept operator comfort in mind. The tools are well balanced, slim and comfortable to handle. Reaction forces are extremely low.

JOB VERIFICATION

For remote indication of clutch release function the tools can be equipped with air signal outlet – RE. This is often used for counting the number of fasteners in a tightening cycle.

LTV29-2 SERIES

- Designed for high speed and small dimensions.
- Slim lightweight design.
- Soft, comfortable grip.
- Easy to reverse.
- Low reaction force.
- Spiral cut angle gears.

LTV29-2

LTV39-2 SERIES

- The fastest nutrunners of this type.
- Powerful motor.
- Consistently high accuracy.
- Many operator-friendly features.
- Spiral cut angle gears.

LTV39-2

LTV FS FLUSH SOCKET TOOLS

- Minimum angle head size gives good access.
- High torque accuracy.
- Integrated sockets give reduced angle head height.
- Spiral cut angle gears.

^a Quick change chuck. ^b Female hex drive. B - Ball retainer

NOTE: All LTV29/39 with -10 (3/8) square drives can be used as either pin or ball retainer.

LTV28 AND 38 SERIES

- Highest reliability when tightening M5-M12 screws.
- Small, durable gears.
- Precise clutch.
- Reliable motor.
- Spiral cut angle gears.

LTV48 SERIES

- Robust, reliable tools.
- Reversible for torques up to 200 Nm.
- Comfortable to operate due to low weight and smooth handles.
- Reaction bars and other accessories available.
- Spiral cut angle gears.

LTV FS FLUSH SOCKET TOOLS

- Minimum angle head size gives good access.
- High torque accuracy.
- Integrated sockets give reduced angle head height.
- Spiral cut angle gears.

HOLD AND DRIVE

Hold and drive bolts are being used increasingly by, for example, truck manufacturers on the frame assembly line, making what used to be a two-man operation, a one-man task. The distinguishing feature of a hold and drive bolt is that one part is held and the other is tightened from the same side.

LTV HAD

- Especially suitable for shock absorber assembly.
- Special tools based on the standard LTV series are available for use on hold and drive bolts.
- HAD sockets are available in three different lengths.
- Special sockets available upon request.
- Also suitable for break-away bolts, Hi Lok/Hi Shear.

LTV48 R200 HAD

NOTE: To reduce the reaction force in the holder, the use of a reaction bar is recommended.

^a At min 5 bar.

^b For low torque applications.

NOTE: For sockets and holders see accessory pages.

Other types of Hold and Drive equipped tools are available on special request.

Non Shut-off

Angle Nutrunners

STALL TYPE

- Low inertia design gives accurate torque independent of joint stiffness – in other words, low mean shift.
- Easy torque setting by adjusting the inlet air pressure.
- Reliable, well-proven design.
- Good accessibility due to small dimensioned angle head.

Model	Bolt size	Square drive	Torque range soft joint				Free speed r/min	Weight kg	Length mm	Angle head height mm	Angle head center to side mm	Air consumption at free speed		Rec. hose size mm	Air inlet thread in	Ordering No.

RATCHET WRENCHES

- Unique accessibility, the ratchet wrench is a superior tool for limited space applications.
- To loosen, turn the tool upside down.

^a Female hex drive.

WORM-DRIVE NUTRUNNERS

- Teasing throttle characteristics give significantly reduced free speed.
- Suitable for:
 - Nutrunning
 - Light reaming
 - Tapping
 - Tube-rolling
- Can also be incorporated in rigs as air motors for intermittent operation.

Model	Bolt size	Square drive	Torque range soft joint				Free speed r/min	Weight kg	Length mm	Angle head height mm	Angle head center to side mm	Air consumption at free speed		Rec. hose size mm	Air inlet thread in	Ordering No.

Service Kits

The spare parts included in the service kits cover a normal overhaul of your tool. Always have them available for a fast and economical repair.

Main parts included:

- Vane kit
- Motor bearings
- Gaskets
- O-rings
- Circlips
- Pins etc.

Introduction – Straight Nutrunners

Fast, flexible and user-friendly

The LTD system offers a flexible, low-cost solution to many advanced tightening requirements. With fixtured tools the operator influence is minimized and very high torque accuracy is achieved.

ARTICULATING ARMS

Where a fixed support on the workpiece for a reaction bar is not available, a telescopic or articulated arm mounted LTD nutrunner can be an efficient solution.

- **Reaction bar blanks** – For single spindle hand-held applications.
- **Mounting plates** – The LTD straight nutrunners have a splined reaction bar connection which can also be used for fixed assembly of the nutrunner. A number of standard mounting plates are available to order.

- **Floating square drive** – For two or more spindles the units must usually have floating spindles to compensate for run-down variations. Models with floating square drive or telescopic front parts are available.
- **Fixture punches** – For mounting of the nutrunner to locally made base plates a punch for the splines connection is available as optional equipment.

- **Air signal outlets** – All LTD models are equipped with air signal outlets for completed operation.

THE LTD SYSTEM

LTD28, 38 and 48 straight nutrunners are based on the power package and clutch from the LTV angle nutrunners.

LTD nutrunners are based on the unique LTP range of twin motor pistol grip nutrunners. With fast run-down and accurate final tightening they offer high productivity and unmatched torque accuracy as well as joint independence.

- Remote control back head – A remote valve is connected to the back head of the LTD-RR tools allowing a better multiple.
- Accessibility – Slim design allows the building of smooth, simple multiples or paired spindle designs. The absence of a clutch makes these tools shorter.
- Flexibility – The range of LTD tools provides you with the options you need to meet your requirements.
- Reversibility – Reversible LTD tools are available.

An optimum combination of torque, speed and weight

With the range of pistol grip nutrunners from Atlas Copco you get the highest possible torque and speed in relation to the weight of the tool. Fast, accurate and highly operator friendly, the tools are available in reversible versions for maximum flexibility.

FAST AND ACCURATE

In LTP/LMP61 tools the twin motor concept provides extremely fast rundown with good torque accuracy, even on soft joints.

OPERATOR FRIENDLY

Our pistol grip nutrunners are comfortable to operate. The reaction bar eliminates reaction forces and the exhaust through the handle arrangement keeps noise levels low.

Single-handed operation combined with the low weight and perfectly balanced pistol grip design make LMP24/61 and LTP61 nutrunners safe and comfortable to use.

REVERSIBLE FOR MAXIMUM FLEXIBILITY

Being able to loosen fasteners without changing tools saves time and effort and raises productivity.

Pistol Grip Nutrunners

Non Shut-off

The twin motor in the 61 series gives faster production and increased accuracy with a minimum of air consumption. Torque level on LMP models depends on the pressure of the air fed to the tool, higher pressure creates higher torque.

- High torque accuracy.
- Swiveling function makes tool positioning easy on the 61 series.
- Fast rundown motor saves time.
- Extremely good torque output to weight ratio compared to single motor pistol grip nutrunners.
- Available as both reversible and non-reversible models.

^a Weight excluding reaction bar.

NOTE: Change over torque is around 4% of maximum torque on a given air pressure.

Recommended hose (61 series) size 13 mm for hose length up to 5 m and 16 mm hose size for length 5-10 m.

Shut-off

Pistol Grip Nutrunners

- LTP61 models are equipped with twin motors and a shut-off valve to ensure that the tool shuts off when the preset torque level is reached.
- Rundown is twice as fast as the LTP51.
- High torque accuracy.
- Extremely high torque output to weight ratio.
- A reversible tool with fixed positions for both forward and reverse.

^aWithout reaction bar.

Recommended hose size 13 mm for hose length up to 5 m and 16 mm hose size for length 5-10 m.

NOTE: Change over torque is around 4% of maximum torque on a given air pressure.

FOR PREVAILING APPLICATIONS

- LTP61X PH is specially designed to handle prevailing applications, such as locking nuts.
- Special gear gives a higher change-over torque.
- Fast rundown motor handles most of the rundown before the slower but stronger tightening motor is used.

RTP NUTRUNNERS FOR HEAVY DUTY BOLTING

- RTP's slim gearpack gives you effortless access to bolts in cramped spaces.
- The torque output of the RTP is adjusted with an Atlas Copco FRL air pressure unit, helping to prolong the lifetime and torque accuracy of the tool.
- The tool's 1" exchangeable drive simplifies maintenance and cuts repair costs.

Introduction	61
Tentec Airbac bolt tensioners and RT Advance hydraulic torque wrench system	62

A dynamic range of bolting tools

Frequently chosen by customers in the oil and gas, power generation, wind energy, and other sectors, Atlas Copco world-class bolting tools and software help you maximize process security, minimize human and operational risk and reduce your overall investment costs. Our custom-designed hydraulic bolt tensioners, “smart” hydraulic torque wrench systems, and industry leading electric and pneumatic nutrunners are supported by Atlas Copco's extensive application expertise and worldwide presence.

IT PAYS TO CHOOSE THE BEST

Atlas Copco's core bolting techniques are hydraulic torque, tensioning, and continuous rotation. Our complete portfolio of advanced bolting tools includes:

- Hydraulic torque wrenches
- Hydraulic bolt tensioning systems

- Electric transducerized nutrunners and pneumatic nutrunners
- Mechatronic and transducerized manual wrenches
- Smart Systems
- Accessories, pumps

We have the best products in all bolting technologies, and all our products are designed and produced inhouse by our own plants in the UK and Sweden.

Bolt Tightening Solutions

Tentec Airbac bolt tensioners

ABOUT TENSION

With tensioners, the action is not directly on the nut, instead tension is applied directly to the stud in order to produce stretch. Once the prestretch is achieved, the nut can be tightened. Once the pressure is released the nut holds the load on the bolt. This produces the clamp force. Multiple tensioners can be used together to provide even load when tightening.

SETTING A NEW STANDARD

- Innovative, market leading technology.
- Minimum operational downtime.
- At least 3 times faster piston retract than spring assisted tensioners.
- Around 20 percent lighter.
- Nickel plated to enhance corrosion resistance.

RT Advance hydraulic torque wrench system

ABOUT TORQUE

Using torque tools, such as nutrunners or hydraulic torque wrenches, you turn the nut. As the nut turns, it stretches the stud. The torque setting for the tool translates into load on the connection. When the tools are used following the appropriate specifications for lubrication, coating and other factors, a desired clamp force can be produced.

OUR FIRST 'SMART' BOLTING SYSTEM

- Torque, angle and time based tightening strategies.
- Tightening feedback with traces.
- Full function remote control.
- 16GB inbuilt memory.
- ToolsNet enabled.
- WiFi: Remote access system support.

The products shown above are just two of our latest innovations. To see our full range of bolting products and solutions, please access our Bolt Tightening Solutions catalog:

Introduction – Battery Assembly Tools

True cordless freedom

Atlas Copco's range of industrial battery assembly tools includes all kind of technologies: shut-off, transducerized, and low reaction tools (LRT). They allow maximum freedom of movement along the line and inside narrow or closed compartments.

BCP – BCV BATTERY TOOLS - EXPERIENCE CORDLESS FREEDOM

The brushless BCP – BCV tools are ideal for quality critical applications where flexibility is essential. Final assembly of cars, offroad vehicles, buses, trucks, aircraft, motorcycles, engines, and white goods are just some examples of applications which can benefit from the performance and accessibility provided by the BCP - BCV tools. The slim, well-balanced design and ergonomic handle make it a pleasure to hold. Its compact size and Lithium-Ion batteries put it among the lightest battery tools on the market. BCP – BCV tools also offer variable speed and plenty of power, with torque levels ranging from 0.8 up to 60 Nm.

All these ergonomic features make the BCP - BCV the kind of tool you can work with all day long.

TENSOR SB NUTRUNNERS – TRANSDUCERIZED BATTERY TOOLS

The Tensor SB are the tools for quality and critical applications, allows adjustable torque settings and has a transducer to ensure superior joint quality.

A robust metal housing ensures that the Tensor SB will stand up to tough industrial environments. Also the battery is powerful, reliable and has no memory effect, which means increased uptime for your production.

TENSOR STB NUTRUNNERS – FAST, LIGHT, TRANSDUCERIZED BATTERY TOOLS

Ergonomically designed Tensor STB pistol-grip (up to 12 Nm) and angle nutrunners (up to 150 Nm) are ideal for safety critical applications in cramped areas. No other battery powered tool can match Tensor STB's unique fastening performance and advanced process control.

Atlas Copco Industrial Radio Communication (IRC) enables the Tensor STB to be partnered with a Power Focus controller for accurate torque monitoring and full joint traceability. At a typical workstation, one Tensor STB tool can be used for several applications within the same torque range.

TENSOR SRB AND TBP – LOW REACTION TOOLS

Tensor SRB, is the evolution to the Tensor STB, designed to support all kinds of tightening strategies, from the traditional direct drive to the most advance Low Reaction Strategies as a TurboTight or Tensor Pulse.

TBP, is redefining what a pulse tool can do. The TBP will change everything you thought you knew about pulse tools. TBP is a cordless tool for one-handed operations, enabling error-proof productions. And our DuraPulse® technology will ensure the robustness of the TBP, making it your new favorite workhorse.

CROWFOOT AND TUBE NUT MODELS

Screwdrivers – Clutch Type

BCP

BCP screwdrivers offer true cordless freedom and superior ergonomics for the operator, thus contributing to outstanding performance.

- Ergonomic, lightweight pistol-grip design.
- 7 brushless models offering variable speed with a speed setting unit.
- Torque range: 0.8-12 Nm.
- Low speed models available.
- Two 18 V batteries: 2.1 Ah flat pack or 4.2 Ah regular pack.

-L stands for low speed models.

NOTE: The tools are set at maximum speed at delivery.

All pistol grip models have 1/4" female hexagon drive for bits with quick change chuck.

Nutrunners – Clutch Type

BCV

BCV nutrunners are durable and reliable and offer flexible assembly. A lightweight and handy tool for maximum operator comfort.

- Robust yet ergonomic angle tool.
- Torque range 1.5-60 Nm.
- There are 3 Li-Ion batteries, 18 V (2.1 and 4.2 Ah) and 36 V (2.1 Ah).

TENSOR SB-B

Tensor SB is Atlas Copco's response to customers who demand a truly superior industrial battery nutrunner. This user-friendly tool is characterized by a combination of quality in every tightening, operator mobility and long-lasting durability. Together these advantages give Tensor SB a unique position on the market.

- Low tool weight and high spindle speed increases productivity.
- Durable metal housing.
- Freedom of working freely in any position.
- Torque range ETV: 2-140 Nm.
- Torque range ETP: 4-12 Nm.

– IRC-B or -B stands for Bluetooth.

– SEL stands for models with premounted Pset selector.

ETV STB-X4

- State-of-the-art HMI with extensive functionality.
- Ergonomically designed tool, compact, lightweight, comfortable to work with.
- Durable housing for long service lifetime.
- Excellent accessibility in cramped spaces.
- External antenna gives superior communication reliability.
- Embedded buffer battery.
- Communication during battery recycling.
- Torque range: 2-150 Nm.

Transducerized Type

Tensor SRB

The SRB reports wirelessly to the Power Focus 6000 system and takes full advantage of Virtual Stations, able to perform low reaction strategies as TurboTight and Tensor Pulse, and traditional strategies as the two steps.

- Operator feedback and battery status via LED indicator.
- A buffer battery makes battery swaps trouble free.
- Integrated indicator on the battery shows battery and health status.
- Dual antenna.
- Rapid Backup Unit (RBU) functionality.

Transducerized Type

TBP

TBP is a low reaction tool with maximum flexibility and high torque. Thanks to the DuraPulse technology the tool uptime is increased and keeps it on the line instead of the tool crib. With TorqueBoost, active cooling and advanced motor steering, the torque build up is fast with reduced hours per production unit and the tool has high productivity.

- DuraPulse technology with new sealing and air separator.
- High torque.
- Excellent ergonomics with low vibrations and reaction force.
- Cooling system to prevent the tool from over-heating.
- Buffer battery.
- Dual antenna.
- Rapid Backup Unit (RBU) functionality.
- LED indicators to provide operator feedback.

Highest productivity with lowest life-cycle cost

Atlas Copco supplies a comprehensive range of high productivity assembly tools with intelligent controllers and a sharp focus on ergonomics. Our many product lines were developed to meet all your tightening needs and give you lowest life cycle cost. Products range from low torque MicroTorque tools providing 0.01 Nm of torque, to high torque Tensor ST tools, offering up to 4,000 Nm.

EBL SCREWDRIVER

Low voltage, brushless screwdriver for demanding applications, with shut-off clutch for high fastening precision, time after time.

MICROTORQUE SCREWDRIVERS

The most innovative and reliable low torque screwdrivers on the market to ensure high productivity and quality in all joints. The new groundbreaking controller, MTF6000, is designed for Industry 4.0. With the fixtured QMC series, or the handheld ETD M ABL V2 series, it is the ultimate solution to improve the competitiveness of any manufacturing process.

TENSOR TOOLS

The Tensor tool range covers all assembly requirements for safety critical and quality critical applications.

Tensor ES: Quality critical applications with high demands on productivity, ergonomics and error proofing.

Tensor SL: Safety-critical low torque tools for small screw applications. It offers compact screwdriver ergonomics with traceability and error proofing capability.

Tensor ST: The second generation of Tensor tools was developed with the focus on reducing tool weight and increasing productivity. Tensor ST has an internal bus connection for intelligent accessories such as a barcode reader and P-selector switch.

Tensor STR, SR: The latest generation of Tensor tools where ergonomics and productivity are taken to a new level.

Tensor STB: The battery version of Tensor ST for safety critical applications.

POWER FOCUS 6000 CONTROLLER

Power Focus 6000 is the market-leading controller for handheld battery and electric tools. Power Focus is a controller with full flexibility and connectivity to fit your production infrastructure. The Power Focus 6000 is compatible with STR, ST, SR and ES.

POWER FOCUS 600 CONTROLLER

The Power Focus 600 is compatible with the Tensor ES tools and is the perfect choice for quality critical assembly. It comes in one single hardware version regardless of which tool model or functionality level is used.

SAFETY GUIDELINES

At Atlas Copco we want you to operate our tools safely. Always read and follow all operating and safety instructions, and comply with local safety regulations. There is a range of accessories for Atlas Copco tools. They are intended to reduce the risk of injury during certain assembly processes.

HOW TO MAKE TOOL OPERATION SAFER

1 Entanglement hazard

- Hands and other objects (long hair, necklaces etc.) can get entangled with the rotating drive, causing severed or broken fingers.
- Do not use gloves.
- Never hold the drive, socket or extension with your hands.

5 Reaction bar

- When a reaction bar is used, keep hands away from the reaction bar while tightening a joint, otherwise hands may get squeezed.

2 Hold the tool correctly

- Keep hands and other objects (long hair, necklace, etc.) away from the rotating drive, socket or extension.
- Hold the tool correctly with one hand on the handle of the tool and the other hand on the top of the angle head.

6 Open end tools

- Never put your finger into the open end of a tool, even if a dual action trigger is used.
- To avoid accidents, to activate the tool, both triggers must be pressed within 500 ms.

3 Supported extensions

- If you use an extension, never hold the extension with your hand while it is rotating. If you need to guide the extension, in order to locate the socket quickly and accurately, use an accessory to reduce the risk of entanglement.

Other advantages are:

- Longer life for angle gear.
- More uniform tightening results.

7 Angle nutrunners with reaction bar

- Use reaction bar at high torque. For soft joints, a reaction bar should be used at >60 Nm.

4 Use goggles

- Always use approved safety goggles to protect your eyes from objects that might accidentally fly into your face.

8 Screwdrivers

- Consider using a support handle or support arms, particularly for straight versions and for torques of 6 Nm and upwards.

Introduction – Electric Screwdrivers

If you're looking for quality, you've found it

Atlas Copco supplies a complete range of advanced electric screwdrivers to match your needs. If it's cutting-edge ergonomics you want, true reliability, or long-life, low maintenance motors, we have tools to match your needs. With models such as MicroTorque QMC, ETD MT, ETD M ABL V2 or Tensor we cover the range from 0,01 Nm up to 200 Nm. They all have one thing in common – high quality.

EBL SCREWDRIVERS

EBL screwdrivers are the best in class clutch electric screwdriver for low torque applications, its brushless motor combined with the high accuracy, delivers the best clutch tool solution for any assembly process.

MICROTORQUE

MicroTorque screwdriver range is the most advanced and intelligent tightening solution for any low torque application: extremely ergonomic, very compact and full of functionalities. It is the right tool to boost productivity and quality, resulting in high efficiency and cost reduction.

TENSOR SR TOOLS

ESD certified, Tensor SR angle tools are fast, compact and easy to operate. They feature an easy-to-configure function button and front LED's for clear operator feedback.

With a push-to-start mechanism and an integrated front guide light, SR straight tools are suitable for both hand-held and fixtured applications.

TENSOR SL

Tensor SL transducerized screwdrivers are available in straight, right angle and pistol grip versions, with a straight model for fixtured applications that is very light and compact. All the tools offer high power-to-weight ratios, good ergonomic designs and clear operator feedback via LED's lights and buzzers (depending on the model).

TENSOR ES

Tensor ES transducerized screwdrivers for quality critical applications are available in straight, right angle and pistol grip versions. All models have a sealed design for robustness and offer high productivity with improved ergonomics.

ESD CERTIFIED SCREWDRIVERS

Atlas Copco offers ESD certified tools in the standard range of screwdriver models most frequently used in the electronics industries. ESD certification means a guarantee against damage of electronic components by an uncontrolled electrostatic discharge (ESD) from the tools.

Conformity to the requirements of IEC 61340-5-1 standard proposal is approved by SP, the Swedish National Testing and Research Institute. In practice it certifies that at no point will the material of the equipment hold an electrostatic potential above 100 V for more than 2 seconds.

DESIGNED FOR LOW-TORQUE ASSEMBLY OPERATIONS

Featuring superior ergonomics and the latest technology, Atlas Copco's EBL screwdriver is setting new standards for electric low-torque screwdrivers.

- Brushless motor provides long working life, extended service intervals and low maintenance requirements.
- Good ergonomics mean maximum operator comfort: comfortable grip, low tool weight and lower noise level due to the brushless motor.
- Reporting tool models have a batch count feature that ensures that all screws have been tightened.
- Soft-stop feature on certain models prevents damage to sensitive electronics and plastic assembly components.

Screw dispenser

Both angle head and adapter needs to be ordered for mounting on EBL.

CURRENT CONTROLLED TOOLS – ETD MABL V2

MicroTorque handheld screwdrivers are designed to deliver outstanding quality with superior productivity in all assembly processes.

- High accuracy current controlled tools.
- Torque and angle monitoring for error proofing customized to any process.
- Advanced seating control tightening strategy that eliminates floating screws.
- Advanced torque seating monitoring to ensure final torque and monitor the clamping torque (unique for MTF 6000).
- Ergonomic design: comfortable grip and low weight to maximize operator satisfaction.
- Controllers and tools are ordered separately.

CURRENT CONTROLLED TOOLS – QMC

MicroTorque fixtured screwdrivers are designed to deliver outstanding quality with superior productivity in all assembly processes.

- Lightweight to maximize productivity in any automation process.
- High accuracy current controlled tools.
- Multistep tightening to maximize productivity and quality.
- Torque and angle monitoring to ensure quality.
- Advanced torque seating monitoring to ensure final torque and monitor the clamping torque (unique for MTF6000).

TRANSDUCERIZED TOOLS – ETF MT AND G4 SYSTEMS

MicroTorque transducerized systems are designed to bring outstanding precision, time after time.

- High accuracy transducerized tools.
- Complete system with one ordering number that includes screwdriver, controller, tool cable, PSU and ToolsTalk MT.
- Torque and angle control and monitoring.
- Multistep tightening.
- Advanced programing via PC software, ToolsTalk MT.

ETF MT 5/10/20/50/80/100/200/500

- Multiple I/Os for integration with assembly line, automation stations or error proofing accessories.

TRANSDUCERIZED TOOLS – ETD MT

MicroTorque transducerized handheld screwdrivers ETD MT are smart, interactive and precise with improved ergonomic design and functionalities, helps to enhance production efficiency, minimize product quality cost and further increase productivity.

- High accuracy transducerized tools.
- Internal transducer helps measure real calibrated torque to further enhance reliability of the torque data and traceability of tightening errors.
- Guiding light and gentle vibration give operators feedback when there are NOK tightening results.

MTF 400

MT Focus 400 is an extremely compact and advanced controller designed to attend the most demanding assembly processes. It offers the advanced seating control strategy, multiple Psets, multi-steps tightening and ensures high quality and productivity. It is compatible with the latest MicroTorque tools including ETD M ABL V2 and QMC (excluding QMC21-05).

- 20 P-sets.
- Multistep tightening.
- Simple programing directly at the controller.
- Advanced programing via PC software, ToolsTalk MT.
- Batch count.
- Different display lights for operator feedback.
- Multiple I/Os for integration with assembly line, automation stations or error proofing accessories.
- ToolsTalk MT included, with Graph Analysis and Net functionality for detailed information.

MTF 6000

MT Focus 6000 is the latest and most innovative controller from MicroTorque including all features of MTF 400 and much more. It elevates the Atlas Copco's low torque tightening and is designed for Industry 4.0.

MT Focus 6000 is smart with new advanced tightening strategies such as Torque Seating Monitoring. With Batch Sequence it is easy to setup simple workflow instructions to ensure efficiency, and the multi communication ports ensures connectivity with external equipment and software.

With two different levels of functionality, the IAM models gives a good offering for every customer. IAM Workstation is designed for a workstation setup with no or low need for advanced tightening strategies and communication. For processes, with a need of communication, data and advanced tightening strategies, IAM Process is the right choice.

Tensor SL

ETD SL

- ETD SL is a very compact screwdriver with excellent power to weight ratio.
- Torque range from 0.3 to 10 Nm.
- Push-to-start function and front lights.
- Small center-to-side distance.
- Ergonomic design.
- Buzzer and additional blue LED for better operator support.

ETD SL

ETP SL

ETV SL

ETF SL

ETV SL

- ETV SL is the most compact transducerised angle screwdriver in the Tensor range.
- Torque range from 0.8 to 20 Nm.
- High durability with spiral angle gears.
- Ergonomic design.
- Buzzer and additional blue LED for better operator support.

ETP SL

- ETP SL is our first push-to-start pistol tool.
- Torque range from 0.3 to 10 Nm.
- Ergonomic, balanced pistol tool.
- Front lights for dark applications.
- Blue light and buzzer.

ETF SL

- ETF SL is the smallest and lightest fixtured tool.
- Torque range from 0.3 to 10 Nm.
- Stroke with 25 mm suspension.
- Small center-to-side distance.

^a For ETV, CS distance over angle head.

ETP SR31

The ETP SR is a pistol type electric nutrunner that delivers accurate, fast and error proof tightening with low reaction force. With TurboTight™ the ETP SR31 can handle one hand operations up to 25 Nm.

Delivers fully traceable results, has a low energy consumption and is simple to set up.

- Perfectly balanced and ergonomically designed handle.
- High free run speed (up to 2000 rpm's) and short tightening cycle (Up to 10 tightenings/min).
- Direct and robust gear box.
- The LED ring provides instant input to the operator and the incorporated speaker improve the operator feedback.
- Integrated function button, customized for your needs.

ETP SR

ETV SR

ETD SR

ETV SR

- SR angle tools are extremely fast, compact and easy to operate.
- ESD certified.
- Easy to configure the function button.
- Front LED's gives better operator feedback.
- Torque range from 2.5 to 30 Nm.

ETD SR

- SR straight tools are ideal for handheld applications and fixture applications.
- Torque range from 1.5 to 16 Nm.
- Front light guide is integrated.
- Push-to-start mechanism.
- ESD certified.

Tensor – the operators' choice

The Tensor range of electric assembly tools covers all station and assembly line requirements for safety critical and quality critical fastening applications. At Atlas Copco we have a proud legacy of putting the operator first and we continuously improve the ergonomic features on each new generation of Tensor tools. Tensor is also one of the most advanced tool ranges on the market in terms of high power-to-weight ratios and operator guidance in the form of clear result feedback via LED's or audio signals.

PRODUCTIVITY GAINS

Atlas Copco's unique Tensor motors give the Tensor range outstanding spindle speeds and, thus, help you achieve lower cycle times in your operation. Exceptional ergonomics in terms of balance, grip and low weight make the tools a favorite of the operators and increase individual productivity.

OPERATOR FEEDBACK

All Tensor tools are equipped with LED's that will indicate the tightening result, green light for tightening OK and red light for NOK. Tensor ST and STR have configurable LED's and an integrated speaker for indicating results via audio signals.

LOWEST COST OF OPERATION

At Atlas Copco we believe that quality is the road to lowest cost of operation over time. A maintained Tensor tool produces the same performance year after year at minimum and predictable costs while ensuring highest possible uptime.

TENSOR TOOLS

Tensor SL: low torque safety critical, configurable tool functions

The Tensor SL range is optimized for safety critical small screw assembly. It offers compact screwdriver ergonomics, combined with traceability and error proofing capabilities.

Tensor ST: safety critical, configurable tool functions

The second generation of Tensor tools was developed with low weight and productivity in mind. Tensor ST has an internal bus connection for intelligent accessories such as a barcode reader and torque selector switch.

Tensor ES: quality critical

Tensor ES transducerized nutrunners for quality critical applications are available in straight and right angle versions. All models have a sealed design for robustness and offer high productivity with improved ergonomics.

Tensor STR, SR: safety critical, configurable tool functions

The latest generation of Tensor tools where ergonomics and productivity are taken to a new level.

ETV ES

- Torque transducer with an accuracy of $\pm 7.5\%$ over six sigma.
- Robust, sealed design.
- New durable motor with higher speeds.
- Engineered in modules with component commonality.
- Clear LEDs visible through 360°.
- Hot swap.

ETV ST

- ETV ST right angle tools are ideal for hand-held and fixtured applications.
- Torque range from 1 to 4000 Nm.
- Tensor ST offers:
 - Extremely high productivity.
 - More ergonomic benefits.
 - Better operator feedback.
- The ETV ST ATEX tools are certified to be used in environments with hazardous gases and liquids.

Pistol Grip Models

ETP ST

- ETP ST is a pistol grip model for handheld applications.
- Torque range from 1 to 20 Nm.
- Female hex drive for bits.
- Low weight and ergonomic grip.
- Easy to access, reverse button.
- Operator friendly, feedback signals with sound and lights.

Tensor ST Revo

Pistol Grip Models

ST REVO

- Unique and patented 360° swivel with transducer.
- Ultra-compact size improves access.
- Reduced weight means less need for fixtures.
- Display on tool gives direct feedback of tightening result.
- Program selection is made directly on tool.
- Ideal for handheld application or fixtures with reduced space.
- Torque range from 60-8000 Nm.

Two Trigger

ETT STR

- Transducer in front for outstanding accuracy and reliability. +/- 2,5% over 6 sigma.
- Built in gyroscope to detect operators influence on tightening.
- Modular STR design for parts commonality between models and sizes.
- Additional front trigger makes the tool ideal for a combined pre tightening and final tightening combination, two tools in one. front trigger can also be used a safety trigger
- High cycle rate capability due to improved heat dissipation.
- Operator feed back through built in loudspeaker, vibrator and high visibility LEDs.

ETP SR31

The ETP SR is a pistol type electric nutrunner that delivers accurate, fast and error proof tightening with low reaction force. With TurboTight™ the ETP SR31 can handle one hand operations up to 25 Nm.

Delivers fully traceable results, has a low energy consumption and is simple to set up.

- Perfectly balanced and ergonomically designed handle.
- High free run speed (up to 2000 rpm's) and short tightening cycle (Up to 10 tightenings/min).
- Direct and robust gear box.
- The LED ring provides instant input to the operator and the incorporated speaker improve the operator feedback.
- Integrated function button, customized for your needs.

ETP SR

ETV SR

ETD SR

ETV SR

- SR angle tools are extremely fast, compact and easy to operate.
- ESD certified.
- Easy to configure the function button.
- Front LED's gives better operator feedback.
- Torque range from 2.5 to 30 Nm.

ETD SR

- SR straight tools are ideal for handheld applications and fixture applications.
- Torque range from 1.5 to 16 Nm.
- Front light guide is integrated.
- Push-to-start mechanism.
- ESD certified.

Error-proofing through intuitive control of the assembly process

Atlas Copco advanced controllers and software provide intuitive monitoring and control of tightening operations performed using Atlas Copco electric assembly tools. Assembly process control and quality assurance is made easy by advanced control functions. The system guides the operator through the assembly process, avoiding mistakes that can result in costly quality problems.

POWER FOCUS 6000

The Power Focus 6000 comes in two hardware versions: Power Focus 6000 and Power Focus 6000 LV.

The Power Focus 6000 is easy to use due to its 7 inch touch screen and intuitive software. The web HMI enables you to configure and monitor the controller from any device with a web browser. Smart software management will guarantee highest possible uptime. Upgrade your controller in a few seconds using only a USB stick.

The Power Focus is based on standard hardware and software components which, when combined, will fulfill all demands, from the most basic stand-alone installation to full integration into the factory network. The modules fit together using the “plug-and-play” concept.

Assembly process control and quality assurance is made easy by advanced control functions. On receipt of assembly information, the Power Focus automatically selects the correct tightening sequence and parameters. The operator is guided through the process, avoiding mistakes that can result in costly quality problems.

PROGRAMMING SOFTWARE TOOLS-TALK 2

ToolsTalk 2 is the user-friendly tool that enables you to communicate with your Power Focus tool controller. It makes programming and process analysis of a tightening station simple.

POWER FOCUS 600

The Power Focus 600 is compatible with the Tensor ES tools and is the perfect choice for quality critical assembly. It comes in one single hardware version regardless of which tool model or functionality level is used. Its powerful industrial design gives a reliable process that will speed up your tightening operations.

Thanks to the intuitive interface and the fact that it's so easy to use you can set up and run a new system from the box in minutes. External computer software is no longer required since you can browse in using a web HMI. The intuitive interface and color screen provide clear operator feedback.

Smart software management will guarantee highest possible uptime. Upgrade your controller in a few seconds using only a USB stick.

MT FOCUS

The new ground-breaking controller MT Focus 6000 is designed for Industry 4.0 and is Atlas Copco's most innovative controller for MicroTorque. The MT Focus 6000 elevates Atlas Copco's low torque tightening offer with advanced tightening strategies, a wide range of communication possibilities and smart solutions for high efficiency in any tightening process. For more information about MicroTorque controllers see chapter Electric Assembly Tools.

POWER FOCUS 6000

This all new fastening solution from Atlas Copco takes productivity, ergonomics, quality and environmental impact to entirely new levels. And all this with the most user-friendly experience ever.

Enjoy the benefits of a system providing a unique operator experience, with superior quality control and the most flexible integration.

ONE PLATFORM

One platform for handheld and fixtured tools. The Power Focus 6000 reduces your inventory costs and training requirements.

Easy to connect and configure back up tools, using the same programming interface. More compatible solutions will continuously be deployed. And the Power Focus 6000 will be your common controller for all tools and needs.

MULTITOOL CONTROLLER

The Power Focus 6000 increases your flexibility in rebalancing assembly lines. Atlas Copco's virtual stations concept allows you to connect up to 6 tools to the same controller. Giving you a simpler installation with less cables, hardware components and network drops. Add to that the lower power consumption, less floor space utilization and a much lower environmental footprint, the benefits are obvious.

- Compatible with: Tensor STR, ST, STB, SR, ES, STwrench and QST.
- Connect up to 6 tools to the same controller with Virtual Stations
- Simpler installation with less cables, hardware components and network drops.
- Lower power consumption.
- Less floor space utilization.

IAM

Virtual stations, software, tightening data and configuration – all in one place. In the IAM two software areas allow for smart software management. Allowing a much safer upgrade process, always giving the possibility to switch between two software versions.

REVOLUTIONARY TIGHTENING STRATEGIES

TurboTight® and TrueAngle® are Atlas Copco's cutting-edge tightening strategies for the Power Focus 6000.

TURBOTIGHT®

TurboTight® lets the tool absorb the reaction force and significantly improves ergonomics for the operator. Shorten cycle times and at the same time improving flexibility. Less hardware means less maintenance.

TRUEANGLE®

TrueAngle® uses a gyro signal to read operator movement, increasing the accuracy of your angle reading. Enabling handheld angle controlled tightening's while removing operator influence. This allows you to narrow down your angle window, and detect the most common assembly problems such as wrong or missing components and damaged threads. Avoid premature shut-offs and detect re-hits.

VIRTUAL STATIONS – THE ENABLER

Virtual Station is the Power Focus 6000 concept that offers the possibility to connect multiple tools and accessories into the system. With the Virtual Station concept, each tool can have its own separate result view on the Power Focus 6000 controller HMI.

The Virtual Station keeps all information about the assembly process, giving an instant overview of what is going on in the production.

TurboTight®

TrueAngle®

Virtual stations

POWER FOCUS 600

The Power Focus 600 controller takes quality critical assembly to the next level. Setting up and using an electric system has never been easier. And, by switching from pneumatic tools, you can reduce your energy consumption by up to 85%. Unbelievable but true – we call it easy transformation!

EASY

Set up and run a new system from the box in minutes. Computer software is no longer required. Intuitive interfaces enable real-time analysis and fast reaction if needed.

EFFICIENT

Same controller hardware regardless of tool model. Powerful industrial design gives a reliable process to maximize uptime and speed up your tightening operations.

ERGONOMIC

Both hardware and software is intuitive, giving clear operator feedback on the screen.

TOOLSTALK 2

ToolsTalk 2, the new generation software in controller programming, is ready to take your line management to the next level. The client-server based software solution is geared to provide quick and easy configuration, as well as complete visibility and traceability to your entire line structure.

Built on a state-of-the-art user experience and with an extended amount of unique features it is tailored to fit your needs and optimized to get the job done. It allows you to delegate additional features at any time to respective stations, through the embedded simple Functionality Management System (FMS). With 100% customizable user rights, you maintain quality control in complex production systems and increase uptime in production critical operations.

Atlas Copco's Station Solutions reduce cost and ensure quality

As part of Atlas Copco's Quality Integrated Fastening (QIF) concept we offer complete error proofing stations. These are created by combining our advanced tightening equipment with standard Atlas Copco hardware and software components. Integrated error-proofing assembly stations help you avoid costly reworking, raise productivity and ensure quality on your production line.

Atlas Copco is one of the few suppliers able to offer a range of products comprehensive enough to build a fully integrated assembly station. QIF error-proofing stations offer the following benefits:

- Increased product quality.
- Standard modules reduce project and set-up time.
- Fast line re-balancing with standard interfaces.
- Higher productivity due to improved operator guidance.
- Full after sales support from Atlas Copco.

FAST, EASY SET-UP

Most QIF products can easily be connected to Power Focus and Pulsor Focus using one I/O Bus cable, and to PowerMACS using one MACS I/O cable. They can be configured using standard Atlas Copco software ToolsTalk. This user-friendly PC software makes programming very simple.

A key factor that makes QIF products so well accepted by users is their logical and intuitive set-up. By combining QIF products with ToolsTalk Logic Configurator, it is possible to make logical diagrams with inputs and outputs that further enhance the flexibility of the products.

SELECTOR 6 SERIES

Improve your productivity and achieve reduction in defects and energy use with superior flexibility and error proofing of your tightening process. Selector 6 Series is designed to give you a perfect Error Proofing solution with outstanding mobility and connectivity. It will improve your productivity and operator ergonomics with increased uptime, make product introduction easier as well as ease of installation.

FEEDBACK

Higher quality can be achieved by giving audio and/or visual feedback about the assembly process to the operators. Time and costs can be saved by reducing reworking and avoiding faulty products leaving the production line. For feedback use Atlas Copco's Stacklights.

REDUCTION IN DEFECTS AND NEW PRODUCT INTRODUCTION

The value of guiding the operator is key when introducing new models or having a big product mix. Selector 6 Series provides visual feedback to the operator, decreasing costs related to scrapping and rework.

Selector 6 Series and wireless connectivity greatly supports variance support by bringing the selector closer to application unnecessary operator movement is reduced.

OPERATOR GUIDANCE

Flexible assembly lines demand different products to be assembled at the same station. Providing direct instructions on a screen with images and text of the assembly process reduces the risk of operator errors. For operator guidance use the Atlas Copco's Scalable Quality Solution 3 and HMIs.

PROCESS MONITORING

Storing production data for documentation and further analysis is a key factor for traceability. Process improvements can be made by analyzing data. This contributes to increasing quality and boosting productivity by minimizing the number of recalls. For process monitoring use Atlas Copco's ToolsNet 8.

TOOLSNET 8

ToolsNet 8 is a data collection and process improvement software application for use with Power Focus, Pulsor Focus, PowerMACS and STWrench with support for other controllers over ToolsNet open protocol. Combined, these products provide total control of the assembly process, providing a platform for quality improvements. Historical data, statistics and capability indexes can be accessed at any time via a standard web browser such as Microsoft Internet Explorer. ToolsNet is the complete assembly process improvement tool.

TRACEABILITY MINIMIZES RECALL COSTS

The production can be followed in real-time through the dashboard or monitored through different reports such as the Result List report or Product List report which provides information of every tightening related to a specified period or product. In the event of warranty recalls, the result database provides access to critical information which can easily minimize the extent of any recall leading to an overnight payback on your investment.

THE RIGHT SOLUTION FOR YOUR NEEDS

ToolsNet 8 is divided in three different packages to cover different needs.

REPORTS

Take the first step in traceability by collecting all tightening results and storing them in a secure database system. Legal documentation and process improvements can be handled by running several pre-formatted reports specially designed to save user time and effort.

ALERT

Extend the usage of available information by collecting all production events as they occur on the assembly line, in real time. Generate reports to identify events that are happening often and trigger emails to the right personnel based on event distribution rules you create. Be always on the alert for quality variation and workstations that require preventative or corrective tool maintenance.

ANALYSIS

The analysis package adds advanced statistical capabilities making it possible to search for variations when it comes to large amounts of production data. Another feature that is added with the analy-

sis package is tool center which makes it possible to track detailed information about the tools that are used in production ensuring that they are serviced and calibrated on time.

SCALABLE QUALITY SOLUTION 3

The Scalable Quality Solution 3 (SQS3) is an error proofing software that helps achieving zero defects and reducing cost of rework, scrap or warranty claims.

In combination with the industrial PC HLTQ it guides operators step by step through the assembly process.

The software ensures that all fasteners are torqued with the appropriate tool, the correct program, and the right socket to improve product quality and eliminate waste of material.

The data collection feature records the results of all assembly tasks for traceability purposes.

The integrated configurator has a user-friendly interface that does not require programming skills to set up and configure new products and processes.

TOOLSNET REWORK

ToolsNet Rework, as a module of the SQS3 error proofing software, helps achieving zero defects in rework or repair processes improving productivity and trust of your customers.

Main functions of ToolsNet Rework:

- Queries ToolsNet for OK and NOK tightening data of products.
- Computes consolidated status (OK or NOK) of products based on tightening data.
- Guides operators through the repair process of NOK products.
- Selects the right tool and correct tool parameters required for the repair process.
- User access control ensures only qualified operators are working at the repair station.
- Returns tightening data of repair process to ToolsNet for full traceability.

Protect your most valuable resource

Operator health is important. If your operators work with hand-held electric or pneumatic tools, the last thing you want is for their health to suffer. However light the tool, when an operator performs repetitive tasks daily, often with incorrect posture, the tool seems to grow heavier by the hour. Add torque reaction from the tightening process, and the result can be hand-arm-shoulder disorders that may lead to injury and even premature retirement.

Give your operators an extra arm! Atlas Copco torque arms are labour-saving extensions of Atlas Copco hand-held tools that ensure accurate tightening, and raise individual productivity in your plant. Available for torques of up to 1000 Nm, these ingenious constructions are the perfect way to lighten the load when performing repetitive tasks on lines or benches.

EASE THE STRAIN

Atlas Copco torque arms take the strain off your operators, and allow maximum freedom of movement and flexibility. Wide fields of reach mean that the operator has a large working area without stretching.

FAST PAYBACK

Investing in torque arms is not such a major decision. With their benefits in terms of increased productivity and improved employee health, payback time is short.

TO CONSIDER

- However light or low torque, daily use of tools for repetitive tasks can result in hand/arm/shoulder disorders.
- On average a female operator can take 2/3 of the same force as her male colleague.
- Is there enough space for a torque arm at the workplace?
- Finished product quality improvement.
- With the use of a torque arm the arm will absorb all the reaction force from the tool and prevent the tool from spinning around its axis. To ensure highest possible accuracy of the clamp force a torque arm should be used to prevent movement of the tool.

BASIC GUIDELINES FOR TORQUE ARMS

Tools used full days with a torque capacity shown in the table should always be used together with a torque arm in order to prevent work related injuries.

	Straight	Pistol	Angle
Ergonomical optimized*	> 4 Nm	> 7 Nm	> 30 Nm
Conventional tools	> 3 Nm	> 5 Nm	> 20 Nm

* Ergonomically optimized tools is electric tools with two step softstop, turbotight or fast clutch pneumatic tool on a hard joint.

TPS – Tool Positioning System

CONTROL THE SEQUENCE AND THE POSITION

With a TPS controller you are always sure that the operators tighten the joints in the correct sequence and the correct position. The TPS controller works together with the SML/SMS T-series positioning torque arms or the SMC POSI L/LA torque arms and tool controller. The torque arms are equipped with encoders, SMS T-series have 2 angle encoders and SML T-series have 1 linear encoder and 1 angle encoder. The SMC POSI L is equipped with 1 linear encoder to measure the distance the arm travels. SMC POSI LA is equipped with 2 encoders, to measure the distance the arm travel and the angle. The TPS works with digital I/Os for OK or NOK signals to the tool controller to determine the sequence and position of the tool, if the tool is out of position the tool will not start and when the tool is in position it will be able to start. After a correct tightening with OK signal from tool/controller the operator will receive an OK signal from the TPS and is able to start in the next position.

EASY PROGRAMMING

The TPS can use self learning programming, position the tool in the arm over the selected joint and confirm position, go to next joint with the tool/arm and do the same procedure. When all joints are selected validate the job sequence and the TPS is ready for its new job.

50 JOBS – 500 POSITIONS

The TPS can have up to 50 jobs and up to 500 positions (sequences). The TPS can send information to the tool controller to change Pset in the same job which means that it can be different torque settings in the same job and that the same joint can be tightened several times in the same job. When programming the TPS it can also be with different Psets for different jobs so that the operator always has the correct Pset from tool controller when the TPS job is selected.

FAST AND SMOOTH TO START TO INCREASE PRODUCTIVITY

A job can be started by the operator by pressing the start button on the TPS

control and if the TPS is set to Level in job start the operator only needs to push the start button once, when the job is finished with Level setting the same job starts automatically again. Jobs can also be started by a switch button, from tool controller or on timer from previous job.

STAND ALONE SYSTEM

The TPS is a stand alone system that works together with Power Focus, Micro Torque controllers and EBL RE driver. A pneumatic license and air tool package is available to make the TPS work with RE controlled air tools.

OPTIONS

All options are activated by a license code. The license code is ordered separately.

BARCODE READER LICENSE OPTION

Use a barcode reader to start a job and/or identify a job for the TPS to select the correct Pset.

RESULT REPORT FUNCTION OPTION

Save the results to a PC. The results can be saved in two ways, report on job or report on sequence and job.

PNEUMATIC TOOL LICENSE OPTION

The pneumatic tool license also includes the necessary valves and hoses for a correct set up of RE controlled air tools.

TPS Controller

TPS CONTROLLER – CONTROL THE SEQUENCE AND THE POSITION

With a TPS controller you are always sure that the operator tightens the joints in the correct sequence and in the correct position.

- Up to 50 jobs and up to 500 positions.
- OK/NOK signal on position.
- The tool will not start when it is out of position.
- Batch count together with OK/NOK on position.
- Works together with Atlas Copco electric tools and RE controlled pneumatic tools.
- Possibility to save and upload set up through a PC.
- Easy and fast set up and programming.
- Error proofing solution.
- ESD approved.

HOW TO ORDER

1. TPS Controller
2. Select positioning torque arm by style (T-series linear or swivel, or SMC telescopic) and torque arm capacity
3. Cable TPS to tool controller
4. Power supply - optional (needed for MTF 6000)
NOTE: Order power cord separately.
5. Select other options if applicable

SMC POSI L

SMC carbon arms with 1 encoder to measure the distance the arm travels. With this arm and encoder it is possible to verify the position due to the distance the arm travels. The encoder is mounted inside the arm to safe guard that nothing can interfere with the distance measurements. The SMC POSI L arm can work in both horizontal and vertical position and thus be roof or wall mounted. The accuracy of the encoder is 0.32 mm and the arm together with a TPS controller control the sequence and position.

- Carbon arm with position control up to 200 Nm.
- Encoder measures the distance the arm travels.
- Verify position due to distance.
- Can be mounted both in horizontal and vertical position for maximum flexibility.
- Accuracy of encoder 0.32 mm.
- Control the sequence and position together with TPS controller.

SMC POSI LA

SMC carbon arms with 2 encoders to measure the length the arm travels and the angle of the arm to determine the position of the arm/tool. With this SMC carbon arm it is possible to verify the position due to the length the arm travels together with an encoder that measures the angle of the arm. The length encoder is mounted inside the arm to safe guard that nothing can interfere with the length measurement and the angle encoder is mounted at the top of the arm. The SMC POSI LA can work in both horizontal and vertical position and thus be roof or wall mounted. The accuracy of the encoders is 0.32 mm and the arm together with a TPS controller will control the sequence and position.

- Carbon arm with 2 encoders to control position.
- Encoders measure the arm travel length and the angle of the arm to determine the position.
- Can be mounted both in horizontal and vertical position for maximum flexibility.
- Accuracy of encoder is 0.32 mm.
- Control the sequence and position together with the TPS controller.
- Arms available up to 200 Nm.

SMC CARBON ARMS WITH 1 ENCODER

SML T-series have 1 linear encoder and 1 angle encoder to determine the position. The arms are delivered with balancer, encoders and encoder cables ready to be plugged into the TPS controller.

- Control the sequence and position together with TPS controller.
- Excellent working area for work bench assembly stations.
- Available up to 100 Nm.

SMC CARBON ARMS WITH 2 ENCODERS

The Atlas Copco T-series of arms are built to handle the most demanding industrial situation when you need to control the sequence and the position. The T-series arms are equipped with two encoders, SMS T-series have 2 angle encoders to determine the position and

SMLT – SERIES TORQUE ARMS

The Atlas Copco linear arms are built to handle the most demanding industrial situations. The robust design offers unmatched user friendliness. The linear arms are equipped with ball bearings for smooth operation, and an adjustable plate for maximum adjustment of minimum and maximum working area. The linear arms have balancer included that will absorb the weight of the arm and tool combination to reduce the weight for the operator. The arms minimize the reaction force of the tool to prevent hand-arm-shoulder disorders. With minimized reaction force of the tool, finished product quality is also higher since there is no movement of the tool and all torque is absorbed in the joint.

- Robust construction for long life and no force transferred to operator.
- Balancer included to remove the tool and arm weight from the operator.
- Available from 5 Nm up to 100 Nm.
- Minimizes reaction force to prevent hand-arm-shoulder disorders.
- Improves finished product quality with all torque absorbed in the joint and no movement of tool.

SMST – SERIES TORQUE ARMS

The Atlas Copco linear arms are built to handle the most demanding industrial situations. The robust design offers unmatched user friendliness and, due to the swivel function, a wide working area is covered with the SMS T-series. The swivel arms are equipped with ball bearings for smooth operation, and an adjustable plate for maximum adjustment of minimum and maximum working area. The swivel arms have a balancer included that will absorb the weight of the arm and tool combination to reduce the weight for the operator. The arms minimize reaction force of the tool to prevent hand-arm-shoulder disorders. With minimized reaction force of the tool, finished product quality is also higher since there is no movement of the tool and all torque is absorbed in the joint.

- Robust construction for long life and no force transferred to operator.
- Balancer included to remove the tool and arm weight from the operator.
- Available from 5 Nm up to 100 Nm.
- Minimizes reaction force to prevent hand-arm-shoulder disorders.

SMC – CARBON ARMS

The Atlas Copco carbon arms have a telescopic design for maximum flexibility in the workplace. The carbon arms are light weight with smooth movements to reduce the operator force to use the arms. Together with a balancer the carbon arms can either retract up or be used in a weightless position to improve operator comfort. The carbon arms minimize reaction force to prevent hand-arm-shoulder disorders. With minimized reaction force of the tool you will also improve finished product quality because there is no movement of the tool and all torque is absorbed in the joint.

- Telescopic design for maximum flexibility in the workplace.
- Light weight and smooth movements for operator comfort.
- Easy to use together with balancer to create weightless solution to improve ergonomics.
- Minimizes reaction force to prevent hand-arm-shoulder disorders.
- Minimizes pinching and can replace reaction bars.
- Improve finished product quality with all torque absorbed in the joint and no movement of the tool.

Tool holder is ordered separately. Choose the appropriate balancer depending on tool weight. Order the balancer kit for easy and fast assembly.

NOTE: A: 17 mm square interface, B: 32 mm square interface. For SMC 200 the tool holders connect directly to the clevis of the arm.

Dimensions

SMC-TT – CARBON ARMS

The SMC-TT torque arm range from Atlas Copco consists of three models varying from 10 to 25 Nm. The SMC-TT torque arms are designed to be used in combination with handheld straight and angle tools, including both electric and pneumatic. They are suited to be utilized for various rail and roof-mounted applications in all sorts of assembly environments. The product range has a modular setup with several available combinations and accessories to provide the most efficient and ergonomic workstation. The availability of a rigid top fixation allows the SMC-TT arm to be fastened to a roof attachment. The 10 Nm torque arm is available in one length version and the 25 Nm models are available in two length variants to achieve better reach.

- Easy to position and handle torque arms that allow for smooth movements to achieve operator comfort.
- Telescopic design for maximum flexibility with an extensive working range.
- Easy to use together with balancer to create weightless solution leading to improved operator ergonomics.
- Minimized strain to prevent wrist/arm/shoulder injuries due to repetitive use.
- Improved finished product quality with all torque absorbed in the joint and no movement of the tool.

TORQUE ARM SML MK II

By mounting your assembly tool on a SML MK II torque arm you will immediately increase the productivity and reduce muscular stress from your operators. All arms are delivered with integrated balancer, 3-axis movement and the Atlas Copco interface for tool holders. The 3-axis movement allows the operator to ease the arm effortlessly around the workstation.

- 3-axis movement for maximum flexibility.
- Strong and durable design.
- Integrated balancer to support tool and arm weight.
- High torque capacity, up to 1000 Nm.
- Same tool holder interface as SML T / SMS T / SMC for arms up to 150 Nm.

Tool holder is ordered separately.

Dimensions

TORQUE ARM SMF

The SMF-25 torque arms are labor-saving extensions of the Atlas Copco handheld tools. They are made of aluminum and are suitable for straight and pistol assembly tools up to 25 Nm. The parallel torque arm has a foldable and space-saving design that eliminates the weight and torque of the tool, thus improving operator ergonomics, providing accurate tightening and contributing to increased productivity.

The SMF-25 arm range has a bench stand with a working area of 710 mm and 870 mm allowing tool setups weighing up to 2 kg (4.4 lb). These arms can also be used with a wall mount, therefore making them suitable for either flat wall surfaces or structural framing systems in assembly environments. All related accessories and tool holders need to be ordered separately.

- Robust construction that diminishes the transferred force to operator and extends product longevity.
- Springs included to eliminate tool and arm weight from the operator.
- Reaction force minimized to prevent hand/arm/shoulder disorders.
- Improved product quality due to torque absorption in the joint and no movement of the tool.

Dimensions

GHP – TORQUE ARM FOR MICROTORQUE RANGE

Atlas Copco GHP torque arm is an excellent means of assistance when using hand-held or fixtured straight microtorque screwdrivers.

Torque arm GHP Mini is recommended with screwdrivers below 100 Ncm, and GHP Small below 200 Ncm.

The GHP torque arms are exceptionally easy to position and handle. The design is intended for low torque applications and work tasks over a long period of time. Comes with appropriate balancing system to support the weight of the tool.

Model	Stroke mm	alfa	Ordering No.
GHP Mini	200	270°	8432 0830 02
GHP Small	400	270°	8432 0830 03
GHP Large	730	270°	8432 0830 04

Tool holder is ordered separately.

TOOL HOLDER GUIDE

Atlas Copco tool holders are designed to optimize your workplace solution. Depending on tool, torque arm and application you can choose from a wide range of tool holders; universal holder, specific diameter holders, spline holders, mounting plates with spine or hole, pistol tool holders or angle tool holders. A tool specific tool holder is always better then a universal holder.

HOW TO BUILD YOUR WORKPLACE SOLUTION

- 1) Tool
- 2) Torque arm
 - Torque range
 - Work area
 - Tool weight
- 3) Tool holder
 - Arm - Tool holder interface type (or mounting on arm clevis, as for SMC angle tool holders)
 - Tool interface: eg. Spline, Diameter or Angle
- 4) Accessories
- 5) For SMC - Balancer

Universal tool holder

Modular tool holder, stand kit	2 x A, B, C	4220 3584 85

Tool holster large

Modular tool holder

COLIBRI – COL

Balancers in the unique COL range hold the load and keep it weightless throughout the entire cable length.

PRODUCTIVITY

COL balancers always hold the tool in the correct position

ERGONOMIC

COL balancers reduce the stress level in the operator's muscles.

SAFETY

The load is not pulled back when released and the surroundings are protected from accidental hoisting of the load.

The cable locks in the event of spring failure (downward braking power).

In all models the braking function can be activated upwards by using the "bow and arrow" principle if you need to slacken the cable to change the tool.

Model	Capacity range		Cable length m	Weight		Dimensions			Ordering No.
	kg	lb		kg	lb	A mm	B mm	C mm	
COL 1 01	0.7-1.3	1.5-2.9	1.7	0.5	1.1	108	72	245	8202 0750 01

WP BALANCER

Weightless positioning balancers with a cone-shaped drum hold the load and keep it weightless throughout the entire cable length. The casing for WP 05/10 are in plastic, the WP 20 in aluminium and the WP 30 models are in abrasion resistant aluminium.

All models except for the WP 20 comes with a swiveling safety hook.

PRODUCTIVITY

WP balancers always hold the tool in the correct position and minimize worker fatigue.

ERGONOMIC

WP balancers reduce stress level in the operator's muscles.

SAFETY

The load is not pulled back when released and the environment is protected from accidental hoisting of the load.

- Steel cable with cable stop buffer.
- Safety chain.
- Quick and easy cable replacement.
- Available with extended cable lengths for roof mounting. (A) -models

Introduction – Fixtured Applications

With our vast experience, we are a supplier you can rely on

Atlas Copco is the world-leading supplier of fixtured solutions with nutrunners and press systems. Our vast experience of designing components for multiple nutrunner systems, combined with knowledge of building, commissioning and maintaining fixtured solutions, makes Atlas Copco a supplier you can rely on.

For fixtured nutrunner systems, Atlas Copco offers a complete portfolio of products designed to satisfy your needs. These range from individual components to operator controlled Multiples by Express® stations and demanding stitching applications. There are two different systems designed for fixtured applications, as well as user-friendly controller software.

Please contact your local Atlas Copco sales representative who will be pleased to discuss your needs.

POWER MACS 4000 AND QST NUTRUNNERS

A state-of-the-art, stand-alone system offering high reliability, accuracy and capability. The system is designed with user friendliness in mind and is easy to build and integrate into production lines.

POWER FOCUS 6000 AND QST NUTRUNNERS

The newest Atlas Copco controller now can offer the possibility to run QST and battery handheld tools in one single controller, bringing even more flexibility and commonality.

POWER MACS 4000 AND PST PRESSES

Design to be the most compact and efficient press in the market, PST system delivers both high productivity and full commonality with Power MACS 4000 systems.

TOOLSTALK SOFTWARE

ToolsTalk software for Power MACS 4000 has been developed with user-friendliness and customer adaptation in mind. This Window-based program can be installed on a station PC, a laptop or a back office PC.

Power MACS 4000 stand alone system – small, cost efficient and powerful. No need for bulky cabinets.

Nutrunners to match your needs

The QST nutrunner is a true state-of-the-art product. Partnered with the Power Focus 6000 or the Power MACS 4000 tightening controller, QST offers one of the most advanced and reliable tightening solutions on the market.

Designed specifically for fixtured systems, these reliable, durable nutrunners have many features.

With QST nutrunners pilot mount or sandwich are possible. Different socket holder lengths (0-200 mm) permit access to applications or parts with tight clearances. For longer bolt lengths, spring travel can be increased from the standard 50 mm to 76 or 100 mm on request.

A built-in memory chip in QST nutrunner stores calibration values and general tool and service data. The tools are ISO certified to +/- 2.5% accuracy and 1 million duty cycles on hard and soft joints.

QST NUTRUNNERS – FEATURES

- Digital communication between nutrunner and controller.
- Hot Swap – replace cable or spindle without turning off the power.
- Increased speed characteristics, up to 3,000 rpm.
- Optional redundant angle encoder and transducer.
- MTBF better than 5 million cycles under normal conditions.

- Inline nutrunner, CT – Equipped with commutation sensor and transducer.
- Off-set nutrunner, COT – Comes with a commutation sensor, off-set gears for narrow bolts and transducer.
- Extended spring travel 76 mm and 100 mm – Nutrunners with extended spring travel for longer bolt lengths.
- Dual transducers, CTT – Nutrunners with dual torque transducer feedback.
- Dual transducers and angle feedback, CATT – Nutrunners with dual angle and torque transducer feedback.
- Angle head nutrunners, CTV – Nutrunners with angle heads. Available with or without travel.

- Lean and compact, PST press is equipped with the latest planetary roller screw capable to handle high speeds, accelerations and decelerations.
- High accuracy and precise load readings thanks to load cell on outgoing shaft.
- Unique and compact mechanical gear unit delivering higher durability level compared to the market belt system.
- PST can be ordered in a brake version. The brake can be used as parking or as holding brake.
- Commonality through the standard and robust QST motor and smart cable connector which can be turned in 2 directions of freedom.

Advanced process control and monitoring

State-of-the-art tightening controllers Power MACS 4000 and Power Focus with their advanced process control and monitoring functions, and supported by ToolsTalk software, can put your assembly operation on the path to zero-fault production.

POWER FOCUS 6000

The Power Focus 6000 is the perfect choice for safety critical assembly processes. It comes in one single hardware version regardless of which tool model or functionality level is used. Power Focus 6000 offers the possibility to run battery tools and the QST nutrunner, one of the most advanced and reliable tightening solutions on the market, in one single controller.

POWER MACS 4000

Power MACS 4000 is Atlas Copco's tightening and pressing controller for fixtured tools. It has effective tools for statistical process control to ensure that quality issues are identified long before they cause production problems.

The controller supports a zero-fault production philosophy with its capacity to collect tightening and pressing data for analysis, continuous improvement and traceability. PowerMACS processing power and memory are designed to handle and send large amounts of data without influencing the tightening process.

TOOLSTALK POWER MACS

The ToolsTalk software for Power MACS 4000 has been developed with user friendliness and customer adaptation in mind and can be installed on a laptop or a back office PC. It is available in two versions: Tightening and Pressing.

POWER MACS 4000

One primary controller is needed per system. The primary controller takes care of external communication and comes with most field busses used in modern production lines (optional). A primary controller can be run as a secondary controller.

The secondary controller comes in two versions; with or without Ethernet switch in the back plate.

- One servo covers the complete torque range from 2 to 8,000 Nm.
- One servo covers the complete force range from 5 to 100 KN.
- No external PC required, inherent back-up functionality for increased reliability.
- Define your tightening and pressing strategy based on results to make sure valuable time and resources are not wasted.
- Powerful PLC onboard.
- Reject Management enabling you to handle faulty tightening in the most efficient way.
- Extensive library of tested tightening strategies – each joint can be tightened in the best possible way in terms of cycle time and quality.
- Stand alone design (no need for bulky cabinets).
- 24V DC supply, integrated Ethernet switch, E-stop circuit.
- Informative display
- Integrated line filter.

MAIN SWITCH BOX – MSB

The MSB is used for power distribution and makes power management easy. It is designed to be fed with 380-480 V AC 3-phase without requiring an external transformer. The MSB leaves room for customer adaptations and the E-stop functionality can be upgraded from class 3 to class 4. Each MSB supplies up to 6 controllers with power.

DISTRIBUTION BOX – DB

The DB provides the same functionality as the MSB except for the main switch and is used as a complement to the MSB for systems with more than 6 channels.

GENERAL BOX – GB

An empty DB, suitable for external system devices.

Model	Ordering No.
MSB Main switch box (Max 6 channels)	8435 5660 00
DB Distribution box (Max 6 channels) + Power cable 1800 mm	8435 6560 50

POWER FOCUS 6000

This all new fastening solution from Atlas Copco takes productivity, ergonomics, quality and environmental impact to entirely new levels. And all this with the most user-friendly experience ever.

Enjoy the benefits of a system providing a unique operator experience, with superior quality control and the most flexible integration.

ONE PLATFORM

One platform for handheld and fixtured tools. The Power Focus 6000 reduces your inventory costs and training requirements.

Easy to connect and configure back up tools, using the same programming interface. More compatible solutions will continuously be deployed. And the Power Focus 6000 will be your common controller for all tools and needs.

MULTITOOL CONTROLLER

The Power Focus 6000 increases your flexibility in rebalancing assembly lines. Atlas Copco's virtual stations concept allows you to connect up to 6 tools to the same controller. Giving you a simpler installation with less cables, hardware components and network drops. Add to that the lower power consumption, less floor space utilization and a much lower environmental footprint, the benefits are obvious.

- Power Focus 6000 is compatible with: Tensor STR, ST, STB, SR, ES, TBP, SRB, STwrench and QST.
- Connect up to 6 tools to the same controller with Virtual Stations
- Simpler installation with less cables, hardware components and network drops.
- Lower power consumption.
- Less floor space utilization.

IAM

Virtual stations, software, tightening data and configuration – all in one place. In the IAM two software areas allow for smart software management. Allowing a much safer upgrade process, always giving the possibility to switch between two software versions.

TOOLSTALK POWERMACS

The ToolsTalk software for PowerMACS 4000 has been developed with user friendliness and customer adaptation in mind. This Window-based program can be installed on a station PC, a laptop or a back office PC. ToolsTalk supports off-line programming; to edit or upload programs, simply connect the PC to the PowerMACS 4000 controller using an Ethernet cable.

- User friendly Windows programming interface with "drag-and-drop" and "copy-paste" functionalities.
- 10 levels of read and write security.
- Trace reporting on torque, angle, current, current as torque and time.
- Improved read-at-a-glance graphics with actual pictures of customer parts.
- Possible to view up to 20 tightening traces simultaneously.
- Graphical system map of hardware and software.
- Configurable cycle data menu for station reporting.
- Real time SPC and TDA reporting.
- Event logging of security access, parameter changes, errors, faults, alarms and warnings.
- Maintenance menus to verify hardware and software changes without machine intervention.
- Run the program in Basic or Advanced mode depending on needs.
- Quick-set functionality for trimming a process in seconds.
- Optimize each tightening by means of the tightening path for each bolt, including start times, stop times, and execution times for the steps.

Quality assurance and manual tightening that gives peace of mind

An improperly tightened joint in any assembly process can cause costs for re-work or warranty and can damage manufacturers' brand image. Atlas Copco's wide range of manual tightening and quality assurance tools and systems offer the right tool for nearly any application to meet high-quality standards, secure error proofing functionalities or even verify measurement requirements.

QUALITY ASSURANCE

Atlas Copco's tightening quality assurance solutions meet torque, angle and pulse measurement requirements for all types of fastening tools and joint verification. This product line offers you tools, analyzers and benches for testing, calibrating, process control and check of residual torque of already tightened joints.

DATA COLLECTORS

The Atlas Copco STpad represents the QA Platform 4.0 innovating data collector, guiding operators through step by step quality inspections, including visual and dimensional checks.

The STa6000 enables you to check the tool in the crib or along the line. Connected to a MRTT-C wrench the STa6000 is able to detect residual torque using the same patented algorithm as the electronic STwrench.

BENCHES

The STbench is the new standard in tool check and joint simulation: it's the fastest solution in the market able to test any tool according the real application joint condition, perfectly integrated in the QA Platform 4.0.

ELECTRONIC STWRENCH

The four-patent STwrench that tightens a bolt with the most advanced torque or torqueangle-strategies with complete traceability and error-proofing functionalities even checking the residual torque on an already tightened joint.

MECHANICAL WRENCH SERIES

Atlas Copco's mechanical wrench product line form the basis for manual tightening. Regardless whether you are working in assembly lines, rework or repair and maintenance, this product line always offers a suitable solution for your tightening situation, even if limited space handicaps your processes.

MECHATRONIC SYSTEM

If an increased and controlled tightening process is needed, combine the high productivity of a click wrench with error proofing functionalities using the newly launched MWR Mechatronic system. This system provides a complete traceability while small dimensions allow to reach even joints inaccessible for standard tools.

STPAD

STpad represents the QA Platform 4.0 wireless hub, guiding the operators through all quality checks, including non-torque test like visual and dimensional checks.

The STpad is a rugged and portable wireless tablet having 10.1" touch display, integrated camera and 2D barcode reader, satisfying MIL-STD 810G standard.

Thanks to flexible software licensing, different features can be enabled:

- **Tool check**

You can deliver highest tool test reliability and operator independence in latest assembly technology such as robot and automated spindles thanks to IRC-C Bluetooth communication. With an STpad you can have real time control over tightening results to assure the high quality you need for a satisfactory result.

- **Joint Check**

Quality auditors performing residual torque check with STwrench is now guided during the execution with pictures and text instructions.

Deep analysis such as torque/angle trace zoom is available from STpad display.

- **Visual Check**

STpad guide the operator also for those checks that don't require numerical measurement, such as defects collection and go-no go test. Visual check processes can be standardized and digitalized through visual check steps definition, avoiding operator mistakes and paperless data collection. Statistic data, corrective actions and issue assignable causes can be also tracked to improve related quality processes.

- **Dimensional Check**

There will always be productions where non-torque related checks need to be conducted – and reported – manually.

These measurements can be crucial information when working with quality assurance over the whole production. So whereas torque is reported automatically into the system, measurements from for example length or pressure, gauge needs to be reported manually to complete the big picture.

All results are safely stored in STpad internal memory or synchronized with QA Supervisor database.

STa6000

In assembly operations worldwide there is an increasing focus on quality. Using sophisticated tools to tighten bolts is simply not enough. It's also important to monitor tool performance, and to test joints after they have been tightened. This is where the Atlas Copco STa6000 come in. The portable STa6000 can be used to check tool performance, repeatability and accuracy for all types of power tools and torque wrenches. Test your tools in the tool crib following service and continuously on the line to monitor performance or test your joint by checking the residual torque using our unique residual torque check function.

STa6000

Improve everyday tasks for Quality supervisors and operators. Reduced weight and compact design makes the STa6000 easy to carry along the line. Checking tools in the Tool Crib and on the line and checking tightened joints means quality guaranteed.

PORTABLE AND ERGONOMIC

The compact STa6000 with long-life battery weighs less than 500 g. No special device is required to carry the system it can be conveniently hung on a strap from the operator's belt.

The STa6000 small size and features make it easy to use in the production line.

QUICK PROGRAMMING

The STa6000 is designed for easy connection to Atlas Copco IRTT-B in-line transducers, SRTT-B static transducers and MRTT-C wrenches. It is also easy to connect the STa6000 to SRTT-L by specific cradle in order to have a compact complete solution. The STa6000 also works with the IRC-Connect, our Smart transducer. The IRC-connect is more than just a cable replacement, is a tool to simplify and improve your daily tasks with an incorporated memory that will store up to 5000 results and traces.

It provides automatic recognition and calibration and allows the operator to start a test with a few clicks: just selecting the tool type to be checked. The test setup is automatically created by STa6000.

MODULARITY – YOU BUY WHAT YOU NEED

The STa6000 is easy to upgrade. You don't need to buy a complete new model. Simply add modules and accessories that expand the functionalities and create your customized torque analyzer system.

COMMONALITY CUTS COSTS

The STa6000 utilizes the same modules and software as the STanalyser and STwrench, thus saving you money.

CLEAR OPERATOR FEEDBACK

STa6000 color screen features intuitive icon menus.

Feedback is clearly displayed thanks to the green or red screen, with the possibility to add a gauge indicator and fully customize information.

STa6000 BASIC

The ideal solution for simple and quick tests.

Quick programming

- The quick tool or joint check test can be launched with STa6000 basic version. Up to 50000 results are stored in the device memory, traces can be seen with TT BLM if the software is purchased.
- No PC is required
- Test conditions can be set up right on the device for each test
- Color screen
- The green/red color screen guides the operator for the tests

STa6000 QC

The ideal solution for operators requiring a complete testing solution.

This version includes all the features listed for the Basic one, and additional others:

• Tools and Psets database

This is a list of tools you want to test (max. 1,000). It contains all information related to the tool, such as type, model, min. and max. torque, etc. The PSet defines how the test has to be performed with acceptance limits. A maximum of 1,000 PSets can be stored and 5 max. per tool can be assigned.

Continued...

- Traces on display**

Traces can be seen directly on the STa6000 screen.

- Customized screen**

The measure screen can be customized with all the important information to have them displayed during the test. It is possible to have on the measure screen information as Cm/Cmk values, sigma, last results also a graphical gauge indicator can be added.

- Full text notes**

Text notes can be added to the results to keep the full traceability of the tests.

- PF and PM Calibration**

STa6000 allows to complete calibrations simply connect the STa6000 to an Atlas Copco controller with either a Ethernet cable or with the small USB to serial adapter. All other operations are done by the STa6000 as the Pset is automatically read from the controller. The readings are also acquired and the new calibration value is stored in the controller. Calibration made easy, fast and completely error-proofed.

- Reports can be printed on a network printer.**

STa6000 AA

The recommended solution for Advanced Analysys.

- The STa6000 ultimate solution**

All the features are included in this version, statistics CM/Cmk graphs and X/R charts can be visualized right on the STa6000 screen.

TT BLM

With TT BLM software, it's possible to manage programs, settings, results and traces of the STa6000 remotely via the network from the office PC.

A smart Excel database for the STa6000 results is featured by TT BLM software.

NOTE: Software license is necessary for the above features.

IRC-CONNECT

The IRC-Connect is not just a cable eliminator. It stores up to 5000 results that can be uploaded to the STa6000 as soon as they are connected. When this device is paired with the IRC-Connect the transducer is automatically recognized.

Thanks to the STa6000, plus multitest functionality, up to 30 IRC-Connects can be connected at the same time for multi-spindle applications.

TORQUE SUPERVISOR

STa6000 is fully integrated with Torque Supervisor software.

It's possible to take advantage of all the advanced features of Atlas Copco Quality data management software with STa6000, programming the tool check and joint check routes to be executed.

ACCESSORIES

With the Barcode Module it is possible to automatically start a tool or a joint test, and it is possible store further scanned information on their results. In addition a work order can be defined to set the scanning order of different identifiers.

With IRC-W Radio Module you can wirelessly communicate to software.

With the USB/Serial converter, it is possible to synchronize to Power Focus, Power MACS and PST for their calibration.

SRTT-L

SRTT-L is a family of transducers for the STanalyser. It is designed for lower torque assembly tools. Both transducers and test joints are exchangeable and can be used with any STanalyser. The modular design allows the user to scale his system as his needs evolve. The same SRTT-L plate can be used with any transducer in the SRTT-L family.

QRTT-B

Tranducers used for QST nutrunner as well as for fixtured Tensor tool calibration. This transducer enables fast, easy set-up with highest system accuracy. By using the QRTT-B, no special test adaptation device between the spindle and the product itself is needed.

QRTT-B

IRTT-B

IRTT-B is the Atlas Copco torque and torque/angle in-line rotary transducers incorporating significant improvements in durability and accuracy. The angle reading system use a patent solution which gives better resolution and longer life. The mechanics have also been completely reviewed to achieve a higher level of durability.

IRTT-B is equipped with a memory chip that is read by the Atlas Copco data analyser. In this way the Data analyser is automatically calibrated to the transducer sensitivity and avoids any possible set-up errors.

SRTT-B**STATIONARY REACTION TORQUE
TRANSDUCER**

Stationary reaction torque transducers are designed for testing wrenches, click wrenches or for tightening tools where rotary action is not desired during measurement. When testing a shut-off tool, a joint simulator is required as an accessory.

The SRTT-B is the new generation of Atlas Copco stationary reaction torque transducers with improved durability thanks to their new mechanical design. The new patented system of fixing the joint simulator on top avoids any possible errors due to the play between the two devices.

A complete range of accessories and a mechanical joint simulator enables you to test shut-off tools or wrenches with square drive output.

MRTT-B SCREWDRIVER

MRTT-B is available in a screwdriver version for low torque applications from 0.1 to 15 Nm. The 15 Nm model has a precision reversible 1/4" drive ratchet consisting of two needle clutches. Sliding bush to convert left and right tightening. The very low friction avoids dragging the screws on the return motion.

Industrial style	Transducer cable 3 m 19 - 10

MRTT-C

The MRTT-C is a revolutionary way to think about a manual wrench. The MRTT-C is an advanced handle that can be connected to the standard smartHEAD used for the STwrench to create a wrench that can be connected to the STa6000 using a standard Atlas Copco cable.

The MRTT-C connected to the STa6000 with Residual or Production RBU can be used to detect the residual torque using the advanced Torque/Angle algorithm, same as the STwrench, or to tight a bolt for production applications.

SMARTHEADS

Square connection smartHEAD have been added to the range of smartHEADs. The square connection smartHEADs allow customers to use any square end fitting, losing thought the poka yoke system offered by end fittings.

- Torque or Torque/Angle reading depending to the smartHEAD
- Led ring like STwrench
- Vibrating handle
- Buzzer
- TAG recognition
- Light in front

QUALITY ASSURANCE SYSTEM – SHARPENING YOUR COMPETITIVE EDGE

To ensure the highest quality of your fastening – and ultimately your company's products – Atlas Copco has developed a comprehensive quality assurance system for micro torques. The ACTA MT4 system provides fast, accurate and reliable measurement of critical parameters.

ACTA MT4 – SMART FEATURES

- Connect to PC via USB/RS232/Ethernet.
- 6 different engineering units to choose from.
- Colour configurable display (Torque/Angle/Status/Trace).
- Battery for portable usage.
- Programmable via keypad or software “ToolsTalk ACTA MT”.
- Dual transducer inputs.
- High resolution OLED colour display.
- Audio signal for operator feedback.
- Digital I/O signals for communication with external devices such as PLC.
- Tool speed measurement function possible when using MT TRA transducers.
- Store and export tightening data to excel with ToolsTalk ACTA MT PC software.
- Calculate average torque directly on the display.

Test Benches

STBENCH

The Atlas Copco STbench represent the state of the art in joint simulation testing the tool according the production application. It provides maximum tool evaluation flexibility. DC electric, clutch, impulse and battery tools as well as torque wrenches can be evaluated in accordance with latest ISO standards.

The new hydraulic system design significantly improve the overall testing time by starting the test quickly and performing multiple test in short time. A new encoder increases the angle resolution, and the improved robust brushes increase transducer lifetime.

STbench new modular design includes different standard options to satisfy any customer needs:

- STpad for full accessibility. Thanks to the removable STpad and IRC-Connect, you can reach automated stations, robots or difficult to reach areas.
- Industrial PC as option instead STpad.
- Hydraulic brakes up to 3000 Nm.
- SRTT-B up to 2000 Nm, suitable for pulse tool.
- Tilting Top option improving test ergonomics.
- Articulated arm directly reaching the application without unmounting the tools from the application.

STbench Standard - Large frame dimensions

STbench Standard - Small frame dimensions

Quality Assurance in Tightening Management Software

QA SUPERVISOR

From scheduling to reporting QA Supervisor is a web based software, accessible from any device – always connected. It manages scheduling of the tests requested and shows status overview. The collection of data from STpad, STa6000 and STbench covers all the QA applications – and each user can work smoothly with a quality dashboard with personalized widgets. Even the reports are customizable to better meet user needs.

QA Supervisor requires one single installation to a server to be managed, this provides different advantages:

- Reduce maintenance and IT costs
- Each user can log in from any device connected to the network with user/password access

Where the joints are critical

Critical fastening duties are among the most essential tightening operations within industry today. So whether you're in the business of assembling cars or trucks, tractors or harvesters, trains or planes, you need to be in control when it comes to production and quality assurance.

STWRENCH

The Atlas Copco STwrench is much more than a standard transducerized hand-held nutrunner. Due to its modular design, you can build the STwrench to meet your exact requirements and create a tool that perfectly matches your applications.

Use the STwrench for production to get full traceability of the entire tightening operation, including torque control, angle control and yield control. Or build your wrench to just tighten your joint with high torque accuracy. Or use it for quality control to check residual torque, to perform joint analysis, including joint behaviour and stiffness, to set the correct tightening parameters for production and to test the reproducibility of joint stiffness on the benches.

THE ULTIMATE WRENCH FOR PRODUCTION AND QUALITY ASSURANCE

With the STwrench you can build the functionality you need into your own tool. Choose three patented components – smartHEAD, RBU and the power supply solution to suit your exact requirements. Then add a fourth: the patented controller that is standard for all STwrenches. Due to the modular design of the STwrench, you can mix and match components to suit all types of applications.

Use it as a basic stand-alone system or integrate it with Atlas Copco hardware and software. The STwrench is versatile enough to tighten hard-to-reach bolts using a variety of torque and angle strategies while providing complete traceability. Yet it handles quality control of residual torque just as easily as it does comprehensive joint analysis.

The STwrench implements a patented residual torque/angle measurement algorithm to measure the torque left on the joints by the tools in production. The STwrench residual torque/angle algorithm makes the residual torque check operator independent.

Furthermore, as the residual point is detected in real time, buzzer, LEDs and vibration alert the operator to stop, avoiding overtorqueing.

SMARTHEAD

The smartHEAD has a built-in memory chip to store calibration values that are automatically recognized by the STwrench controller. Choose from nine different sizes ranging from 15 to 1000 Nm, which is connected to the controller by a patented system allowing a fast connection. It can be with or without Gyroscope and the torque transducer is made to guarantee length-independent

reading. TAG recognition patented solution is used to assure Poka-Yoke operations. It includes at front a Led bright light to improve visibility in dark bolt area.

STWRENCH CONTROLLER

This is the brain of the wrench. It has a clear and visible display, LED ring, vibrating handle and buzzer for immediate feedback to the operator. It has dedicated slots where you can insert the RBU, one wireless module and the Bar Code Module (see Optional Accessories).

The STwrench Controller can be powered by a patented bi-energy solution such as the long life STwrench Battery or by Tensor SL connected to the Power Focus via the STwrench Cable Box.

STWRENCH RBU

Atlas Copco's patented Rapid Backup Unit (RBU) concept transfers functionality to a non-configured hardware unit,

ensuring that hardware can easily be upgraded. The RBU also acts as back-up for programming and configuration. If a change of hardware is required, just fit the RBU to the new hardware, switch on the unit and you're ready. All programming and network configurations are transferred in seconds. The RBU cuts downtime to a minimum.

OPEN PROTOCOL AND API

The STwrench can be easily and wirelessly integrated with Customer systems thanks to the Open Protocol communication.

For more advanced integration, also the API are available in combination with the dedicated API RBU to integrate one or more STwrench in Customers' systems.

SMARTHEADS AND CONTROLLER

Square connection smartHEAD have been added to the range of smartHEADs. The square connection smartHEADs allow customers to use any square end fitting a losing thought the poka yoke system offered by end fittings in this catalogue.

BI controller is the new controller with the battery inserted in the STwrench handle. New batteries are to be used only in this controller. Recharge these batteries using standard battery charger with BI battery charger adapter.

**HOW TO ORDER YOUR STWRENCH**

1. Take the STwrench Controller
2. Select your smartHEAD
3. Select your End fitting tool
4. Select your RBU
5. Select the Battery
6. Select if you want optional modules

X. – smartHEAD, Y. – STwrench Controller, Z. – Battery, K. – Total length

IRC MODULES

Two different IRC modules each with different wireless technology. No extra special software is needed, it is necessary only to plug in the new module to activate the communication. The communication can be to the Power Focus, to the QAT node, to the STwrench cradles or to different systems on the net. The radio modules Plus versions features a more powerful antenna for more stable connection and improved communication range.

NOTE: As the dimensions are bigger, a different cover needs to be mounted.

BAR CODE MODULE

Enables the Bar Code to be read. STwrench is able to handle four different Bar Codes that can be used to activate or control the process and for traceability purposes. It is only necessary to plug in the module to activate the function.

STWRENCH BATTERY

All batteries are lithium ion ones. The standard battery gives up to 16 h of working time (10 h if wireless communication is used). BI and HD batteries have a working time of 6 h (4 h with wireless communication). Use the standard or the HD battery with the standard controller. BI batteries are only for BI controllers.

STWRENCH CABLE BOX

Wired to connect the STwrench to the Power Focus using a standard Tensor SL cable. The STwrench cable box supplies power to the wrench and handles the communication between the wrench and the Power Focus.

STWRENCH BATTERY CHARGER

To recharge the battery, it can be mounted in a horizontal or vertical position. It takes 4 hours to completely recharge the STwrench battery.

POWER FOCUS

For fieldbus connectivity and additional I/O port, or for backup station, the STwrench can be connected in wireless with PF or IRC Focus. It allows also the possibility to connect all QIF accessories such as stack light etc ...

TOOL HOLDER

The tool holder is a cradle for the STwrench that can be mounted either on a table or on a wall, providing a safe housing for the wrench.

RUBBER PROTECTION

Rubber protections for the STwrench provide both a protection for surfaces that come in contact with the wrench and a better grip for the user. Choose a rubber protection for each of the sections of the STwrench.

Mechanical wrench series

The mechanical wrenches in the Atlas Copco Saltus product line form the basis for manual tightening. They enable you to find the optimal solution for your individual tightening situation regardless whether you are working in assembly lines, rework or repair and maintenance, and even when limited operating space is available.

The wrenches are also the perfect back-up strategy for your controlled assembly technology.

With regard to workplace equipment and costs, manual tightening wrenches are often more efficient and increase your productivity. The easy handling has earned wide acceptance among operators.

Our different wrench types offer the right strategy for nearly any application.

CWR 'CLICK' WRENCH SERIES

The torque wrenches in our CWR series provide the distinctive "click" which is a very clear feedback when reaching the pre-set torque value. The repeatability of $\pm 4\%$ makes them perfect for use in assembly lines.

Standard drive enables the use of a wide range of suitable end fittings.

BWR 'BREAKING' WRENCH SERIES

The torque wrenches in our BWR series are primarily used in professional industrial environments. The possibility of over-tightening is significantly reduced due to a 22° breaking-angle of the unique BWR mechanism. Therefore, the BWR wrenches are very well-suited for use in assembly lines as well as for repair and maintenance.

You can profit from a wide range of end fittings which are quickly changed.

MICROSWITCH ADAPTOR

This new adaptor upgrades your click or breaking wrenches into a signal transmitting wrench. Connected via cable to a customers PLC system, this adaptor can support control functionalities as batch counting and line control.

SWR 'SLIPPING' WRENCH SERIES

The torque wrenches in the SWR series are "automatically triggered" once the pre-set torque value is reached. The Camover-technology completely avoids over-tightening. After triggering, the SWR wrench is again ready to use. The integrated ratchet function ensures you controlled clockwise tightening. The high repeating accuracy with a tolerance of $\pm 4\%$ makes the SWR wrenches ideal for assembly lines for extreme continuous operation.

Mechanical Wrenches

CWR 'CLICK' WRENCH SERIES

- Wide range from 2Nm up to 300Nm.
- Very small sizes ideal for tightening in limited space.
- Repeatability of $\pm 4\%$.
- Easy and safe adjusting and handling.
- Standard drive (9x12 or 14x18) for a wide range of suitable end fittings.

CWR

BWR

SWR

BWR - 'BREAKING' WRENCH SERIES

- High process reliability as over-tightening is significantly reduced due to the 22° breaking angle.
- Wide range of wrenches from 2Nm up to 2000Nm.
- BWR-D models allow use of standardized end fittings with 9x12 or 14x18 drive.
- Extremely high durability and high repeatability of $\pm 4\%$.
- Robust construction.
- Easy and safe adjusting.

SWR 'SLIPPING' WRENCH SERIES

- Torque range from 5Nm up to 110Nm.
- High process reliability as camover mechanism avoids over-tightening.
- Overloading of the wrench itself is impossible.
- Repeatability of $\pm 4\%$.
- Robust construction.
- Easy and safe adjusting.
- 3/8" (SWR-30 / SWR-60) respectively 1/2" (SWR-110) ratchet drive allows use of standard sockets.

MICROSWITCH ADAPTOR

- Upgrades CWR or BWR wrenches (as seen from revision D) into signal transmitting devices.
- Easy support of control functionalities as batch counting and line control.

MWR Mechatronic system – more than a click!

Increase the quality of your joints considerably with the error proofing functionalities of the MWR mechatronic system. Combining the productivity of a click wrench with the traceability of an electronic one, this smart manual fastening system optimizes your tightening processes enormously. The online results provide a complete traceability of the tightening process.

MWR MECHATRONIC WRENCH SERIES

Based on the mechanical “click” wrench the MWR mechatronic wrench is highly productive. The clear physical feedback with the distinctive “click” in combination with the colored LEDs makes it easy to handle even for untrained workers.

Size and performance makes the MWR wrenches optimal for limited space applications with all functionalities in a compact size. Thanks to standard drive (9x12 and 14x18), the operator can choose from a wide range of end fittings for his application.

Two different models offer the right strategy depending on customers' needs and application:

- MWR-S (OK signal only)
- MWR-TA (Torque and angle measurement).

Clean up your work areas with the MWR charging cradle, a stable holder and battery charger, which ensures that the wrench is always ready for performance.

CONTROLLER FOCUS 61

In combination with the controller Focus 61 the MWR mechatronic wrench series offers a controlled tightening process monitoring torque, angle and correct time of release. An optional stacklight connected to the Focus controller signals the status or any error of the tightening.

The Focus controller handles the process and collects all data reporting all results in real time for full traceability. While managers can monitor everything via ToolsNet.

MWR MECHATRONIC WRENCH SERIES

- High process reliability thanks to complete process monitoring.
- Wide range from 5 - 300 Nm.
- Small size of 177 mm makes the MWR-25 ideal for tightening in limited space.
- MWR-S: OK signal only.
- MWR-TA: torque and angle measurement.
- Colored LEDs for clear feedback.
- Standard drive (9x12 and 14x18) for wide range of end fittings.

Maximum material removal with minimum effort

Atlas Copco Turbine Grinders give you twice the power with half the weight and are impossible to stall with the right installation! Atlas Copco's range covers all, you can rely on maximum material removal with minimum effort.

DIE GRINDING

Small precision deburring – die grinding is performed with either tungsten carbide, high speed steel burrs or mounted points.

The choice of burr depends on the size of your job. A larger volume of removed material will require a bigger size of the burr's head.

Select the tool r/min depending on the diameter of the burr head, the material to be ground and the material in the rotary burr. Use tungsten carbide burrs for hard and tough materials. High speed steel burs are recommended for unhardened and medium hard materials. Example, see table below:

Burr head Ø	Unhardened steel		Soft material
	Hardened steel Tough materials	Softer materials Cast iron	Wood, brass Plastics, Al.
Up to 6 mm	– TC – HSS	38000 –	38000 20000 20000
Up to 12 mm	– TC – HSS	30000 –	30000 – 20000

TC – Tungsten carbide tipped rotary burr. **HSS** – High speed steel burrs.

For mounted points, follow the recommendations that relate to the particular mounted point.

ROUGH GRINDING

Pure material removal is determined by the power generated at the grinding process. The applied feed force and the rotation of the wheel generates a cutting force which, multiplied by the peripheral speed of the wheel, represents the power of removed material. (Power=Peripheral speed x Cutting force).

A powerful grinder will provide enough power with maintained rotational speed, when applying feed-force. A suitable combination of operative rotational speed, feed-force applied by the operator and power of the grinder, will give you the best combination for the material removal required.

As rough grinding is performed with bonded abrasives, a limitation of rotational speed is necessary in order to prevent wheel fractures due to centrifugal force.

The peripheral speed is limited to 80 m/s for fibre reinforced depressed center, straight and cutting off wheels. Resin bonded cup and straight wheels are limited to a peripheral speed of 50 m/s.

SANDING AND POLISHING

Unlike die and rough grinding, sanding and polishing applies to requirements of a surface. A fine surface will require a fine grit paper, fine Scotch-Brite, Bear Tex or a soft polishing bonnet. Rougher surface grinding will require a higher material removal rate and thus a coarser grit paper.

Similar to rough grinding, a rough surface, ground with coarse grit will benefit from a high rotational speed. The limitations are, however, the maximum allowed speed of the backing pad and the fibre disc.

Normal sanding speeds for fibre discs of diameter 125 mm, 180 mm and 230 mm are 4000 to 6000 r/min.

Polishing with different pastes and compounds requires low speed in combination with high torque. Suitable speeds are 1800 to 2200 r/min.

Sanding with wet coated abrasives is best performed at low speeds, partly because water is thrown out into the periphery and partly because of the fine grit.

Scotch-Brite, Bear Tex and flap wheels perform best at 50% of their maximum allowed rotational speeds.

THE SPEED GOVERNOR

The amount of material removed in the grinding process depends on the power of the tool and the operative rotational speed. The diagram below shows the correlation between torque, power and rotational speed of a non governed pneumatic grinder.

In order to remove material, the operator has to apply a feed-force on the work-piece. Consequently the rotational speed decreases and having passed approximately 50% of the free speed, the operative power outtake starts to decrease. Theoretically, the most material would be removed at approximately 50% of the free speed on a non governed grinder, (diagram 1).

Atlas Copco grinders are compact and smooth running, partly due to their speed governor. The air is governed to the air flow necessary to maintain the rotational speed regardless of load (to the extent of the power of the grinder).

The correlation between power, torque and rotational speed of a governed grinder is shown in diagram 2.

A theoretical optimum of material removal is reached at approximately 80% of the free speed. The grinder generates maximum power, removing more material with applied feed force. The rotational speed decreases negligibly.

Air is used economically, as the flow through the motor is adjusted after applied load. Air consumption at free speed is minimized. The governor opens and lets in more air during load thus keeping the optimal r/min.

THIS IS YOUR RESPONSIBILITY

Always read and understand the safety information supplied with the tool and on www.atlascopco.com. All locally legislated safety rules regarding installation, operation and maintenance shall be respected at all times.

1. Check the free speed

- The measured speed at a pressure of 6.3 bars must not exceed the rated speed, which is marked on the grinder.
- Remove the grinding wheel and outer flange before checking the free speed.
- Carry out checks daily.
- Make sure the speed marking on the tool is legible.
- Return the machine for repair in the event of overspeeding.

5. Check the flange and wheel

Make sure that flange and wheel combinations correspond to national regulations.

- Check that the flanges are undamaged and clean.
- Attach the wheel with the recommended torque.
- Always disconnect the air-supply when changing the wheel or adjusting the tool.
- Test-run your grinder in a protected area after assembling the wheel.
- Check that the grinder is working correctly.

2. Check the wheel guard

The wheel guard protects your health and safety.

- Always use the recommended wheel guard.
- Check that it is not damaged.
- Never use a grinder without the wheel guard.
- Position the wheel guard between yourself and the grinding wheel.

Check that the trigger is working correctly.

- The trigger must never be removed or fixed by tape for example.
- If the trigger is not working properly, make sure that it is replaced.

6. Personal protection equipment

Make sure that operators wear:

- Eye protection, goggles or a visor.
- Ear protection.
- Gloves.
- Steel toe-capped shoes.
- Protective clothing, such as a leather apron.
- A helmet (for heavier applications).
- Avoid loosely hanging clothing, hair, jewellery (risk of getting caught).

3. Maximum speed

Make sure that the stated maximum speed of the grinding wheel is greater than or equal to the speed specified on the grinder.

4. Check the grinding wheel

Make sure that the grinding wheel is not cracked or damaged in any way.

- The grinding wheel should have the correct hole dimensions and be fitted correctly on the spindle to avoid unbalanced vibrations.
- Damaged grinding wheels must be removed and replaced immediately.
- Do not use dropped or damaged wheels, as these can cause serious injuries.

7. Working area

Ensure that the area in which you are working is kept free from other people so that no one can get injured.

- People nearby must also wear hearing and eye protection.
- Check that there is good ventilation and dust extraction from the premises.
- There should be a stand or a place available, on which the machine can be safely placed.
- Work within a sealed-off area, if possible with protecting walls, since there is a risk that broken discs could fly off.

During work

Stop using the grinder if abnormally loud noises and vibrations occur during use. The grinder and its accessories must not be modified in any way.

After the work is finished

Make sure the machine is switched off and has come to a complete stop before it is put down. Put down the tool carefully, so that there is no risk of the tool starting by itself.

Maintenance

Make sure you follow the service instructions provided and the recommended service intervals. Do not dismantle safety-related parts such as the speed governor and overspeed shut off. These parts should be completely replaced when damaged.

TURBINE TECHNOLOGY BOOSTS PRODUCTIVITY

More efficient than a conventional vane grinder motor, the 2 stage turbine motor in the GTG25 provides an extremely high efficiency leading to great rate of material removal on the roughest surfaces. A speed governor ensures optimum process speed and process time is cut to a minimum. Since the job is done faster, the total energy consumption is significantly lower for each job.

GTG25 F120-13

GTG25 F085-18

REDUCES OPERATOR STRAIN

The GTG25 is ergonomically designed in every aspect. Its high power-to-weight ratio, 2.5 kW of power in a 2.1 kg tool, makes grinding much easier for the user. Combined with other GTG25 features, for example, an ergonomic angled throttle handle and an autobalancer to minimize vibrations, the overall result is less strain on the operator.

HIGHLY SERVICE FRIENDLY

With its all-metal design, the GTG25 turbine grinder is a robust, durable tool. Service intervals are long and servicing is easy thanks to modular internal components and Service Kits from Atlas Copco.

The GTG40 are the most powerful grinders in the turbine grinder range, with incredible power for their size and weight. The range includes angle and straight type grinders for virtually every common rough grinding application.

- GTG40 F – for rough grinding and cutting off with depressed center wheels.
- GTG40 S – for surface finishing with fibre discs and wire brushes.
- GTG40 C – for rough grinding with cup wheels.
- Dust extraction – Efficient accessory for extraction of air-borne dust in sanding applications with fiber discs.

MORE EFFECTIVE

The turbine motor is more efficient than a conventional grinder motor. Therefore it takes less time to do the same job. Also the total air consumption will be a lot less for a specific job.

GTR40 4081 0153 91

- LSF07 is a high speed model for precision grinding and polishing. LSF07 is delivered with a 3 mm collet and can be equipped with a 1/8" collet as optional. (Without speed governor)
- LSF12/LSV12 – Small and comfortable die grinder with up to 360 W for maximum control in cramped spaces. All models are delivered with speed governor and a well balanced 6 mm Erickson collet.
- LSF19/LSV19 – All models in the 19 series are equipped with a powerful 0.5 kW air motor and a speed governor. The angled models (LSV) have a patented solution that overcomes temperature and leakage problems commonly associated with angle head tools. The result is a leak free and self-cooled angle head. All models are lubrication free except for the high speed model LSF19 S460.
- LSF29/LSV29 – Powerful 1 kW air motor, with speed governor and scatter damping. Impressive power-to-weight ratio.
- LSF39 – One of the most powerful one hand die grinders on the market, up to 1.8 kW. The die grinders in the 39 series are lubrication free with scatter damping for maximum operator comfort and safety.

Atlas Copco straight grinders for cone wheel or collet, are suitable for grinding in holes and cavities in castings. They require rough abrasives, which must be attached to the tool with a rigid shank or to be mounted directly to the spindle.

The power ranges from 1.5 kW to 2 kW. All Atlas Copco tools are designed with focus on operator ergonomics and maximum power, the best combination for maximum productivity.

- If you need maximum power, then LSR48 is the natural choice. You will have access to 2 kW in combination with an autobalancer for even less vibrations.

LSR48 S150-CW

Straight Grinders

For Straight Wheels

Atlas Copco straight grinders, equipped with a straight type 1 grinding wheel, offer a high rate of material removal in application like cutting and grinding of welds and edges.

The power ranges from 0.6 kW to 2.9 kW.

- The LSR28 is suitable for lighter applications where accessibility is first priority. Low sound and low vibration levels thanks to the unique vibration damping system. Thermally insulated throttle handle and piped away exhaust air are some of the LSR28 product features, all designed for the best comfort for the operator.
- LSR43 has a proven and rigid design, and is suitable for those really tough applications where durability is needed.
- If you need maximum power, then LSR48 or LSR64 is the choice. 2.9 kW in combination with auto balancer for even less vibrations (LSR48).

Vertical Grinders For Depressed Center, Cut-off and Cup Wheels

The rigid design with a vertically standing air moto gives impressively long service life and durability.

- LSS series is suitable for rough grinding and cutting off operations on open surfaces.
- The power is impressive and ranges from 1.4 kW to a massive 3.8 kW.
- LSS53 is equipped with a unique silencer that reduces the sound peaks created at start and shut-off.

Surface sanding jobs with coarse grit fiber discs on stiff pads or with wire brushes, require power. The Atlas Copco LSS series are reliable workhorses with lots of power that will be at your service for a long time. The rigid design with a vertically standing air motor and nodular cast iron cylinder gives impressively long service life and durability.

- LSS series is a good choice in applications where accessibility is of less importance.
- LSS53 is equipped with a unique silencer that reduces the sound peaks created at start and shut-off.

Angle Grinders

For Depressed Center and Cut-off Wheels

No matter which of our vane grinders you choose you will get durable tools with high power and low weight. In addition, vibrations and noise are on a low level.

- **LSV19** – For work in cramped spaces, the LSV19 is small yet powerful, and lubrication free.

Features: Speed governor, sealed angle head, thermally insulated handle and lubrication-free air motor.

- **LSV28** – Small, yet powerful giving 0.75 kW.

Features: Speed governor, sealed angle head, thermally insulated handle and lubrication-free air motor (LSV28 S060-18 model).

- **LSV39** – If you are looking for the most powerful one-hand angle grinder on the market, then you have found it – up to 1.8 kW.

Features: Speed governor, sealed angle head, lubrication-free air motor, lockable spindle and thermally insulated handle. The auto balancer reduces the vibrations by up to 50%.

- **LSV48** – Our most powerful angle vane grinder with 1.9 kW for ultimate productivity.

Features: Speed governor, sealed angle head, lubrication-free air motor, lockable spindle and thermally insulated handle. The autobalancer reduces the vibrations by up to 50%.

Angle Sanders

For Sanding and Polishing

- LSV12 series sander** – For finer work where less power and more control are needed. Available with collet or threaded spindle.

Features: Speed governor, high quality gears and lever with feathering characteristics.

- LSV28 series sander** – The 28 series comes in various speeds and in a wet sanding version. Wet sanders have central water supply (water feed through the angle head) for optimal water distribution on the work surface. Features: Speed governor, sealed angle head, LF models have lubrication-free air motor.

- LSV39 series sander** – Powerful one hand sander for medium rough to rough sanding.

Features: Speed governor, sealed angle head, lubrication-free air motor and lockable spindle.

- LSV48 series sander** – Our most powerful angle vane sander with 1.9 kW for ultimate productivity.

Features: Speed governor, sealed angle head, lubrication-free air motor, autobalancer and lockable spindle.

Belt Sanders

For Sanding and Polishing

LMB27/LMB35 are suitable for precision sanding where access is difficult with conventional sanders.

The head rotation provides a versatile solution for many applications.

Orbital and Random Orbital Sanders

Atlas Copco series of random orbital sanders combines all the important customer and application requirements in a very competitive range of products. Applications like sanding before painting and surface coating, polishing with wax and surface conditioner are all quickly done with the small and easily operated LST20-range of sanders.

All models are lubrication free and have silicone free components. The full range includes standard and dust extraction models, with three different orbit diameters to choose from.

The fact that dust can represent a hazard in the working environment is well documented.

Dust particles from certain materials are dangerous to health. Even inert dust particles that cause no permanent damage can still be retained in the body and make breathing more difficult.

Efficient dust control can make a significant contribution to efficiency and productivity in industrial operations. It is already a requirement in countries with strict health and safety regulations.

Efficient dust control will:

- Reduce the health risk for operators exposed to potentially dangerous particles.
- Give a more favourable working environment which will encourage greater efficiency and effort from those who operate industrial tools.

The most efficient method of dust collection is extraction at the point of dust creation, i.e. on the tool itself. This not only ensures very efficient extraction but also allows a relatively low power vacuum source to be used.

Atlas Copco spot suction kits provide

LSV 39

an extraction hood fixed to the tool. It is fitted with a plastic or brush edge to trap heavier particles as well as the small ones. The following pages show a number of applications and the necessary dust extraction kits with their contents.

Pattern fixture cutting of composite in the aerospace industry as well as trimming of composite materials is preferably done with a router. The LSK37 is the only router with dust extraction and support bearing integrated into one unit. The LSK38 is prepared for using other router heads that are available on the market. This gives the LSK excellent performance and ergonomics in most composite applications.

- Productive** – The speed governor maintains the rotational speed at applied feed force which enables fast and effective cutting and prevents the bit from clogging.
- Ergonomic** – An integrated dust extraction hood for deportation of hazardous dust, thermally insulated throttle handle, sound dampening exhaust valve and piped-away exhaust air provides the operator with the best working environment.

LSK38

KIT FOR SANDING WITH FIBER DISC

Circular cutting operations in glass and carbon fiber as well as sheet metal and wood can successfully be performed with a circular cutter.

- Effective** – LCS10 and LCS38 cut to a depth of 10 and 26 mm respectively.
- LCS38 is suitable for diamond coated blades only.
- Dust extraction** – Cutting of composite materials generates dust containing particles that are hazardous to health. The dust must be deported in order to prevent the operator from inhaling it.

LCS38 is equipped with a cutter blade guard with integrated dust extraction hood for external vacuum source.

These tools make light of the toughest jobs

Atlas Copco percussive tools are ideal for all material removal tasks in foundries, engineering workshops and shipyards. Built-in-ergonomic features such as vibration damping reduce the human load, delay fatigue and help protect the operator against the ill effects of long-term exposure to vibration and noise.

Our tools are made out of lightweight alloys to keep weight down while maintaining performance. This makes our tools extremely effective in the hands of your skilled operators.

WELD FLUX REMOVAL

Our tools are used when fettling welds from flux and spatter and in general scaling operations.

The conventional scaler RRC 13 and RRC 13B with a blowing function are the preferred models for these types of application. These tools have the right power and a sturdy reliable design. They also have a low vibration level for conventional models.

RUST AND PAINT REMOVAL

Rust and paint removal is a common application found in various types of industries such as shipbuilding, large transport sector and on offshore rigs.

Our RVM07B has low noise and is vibration damped. The standard chisel delivered with the tool is carbide tipped for a long service life. The tool is also equipped with a clean blowing device.

For lighter jobs the needle scaler RRC 13N is the ideal tool. Needle sets of different shapes and material are available to suit most operations.

CHIPPING AND SCALING

Percussive tools for chipping and scaling are widely used in all kinds of metalworking, construction and other industrial areas. Applications could be slag chipping, concrete trimming and sheet-metal cutting.

We offer high power-to-weight tools for these kind of applications. RRF 21/31 and RRD 37/57 models are vibration damped for operator comfort.

Our RRC22-RRC75 models are robust and highly dependable conventional chipping hammers suitable for heavy roughening.

Product Safety

IMPORTANT: All local safety regulations with respect to installation, operation and overhaul must always be followed.

AVOID ACCIDENTS

- ① The chisel, die or punch may fall out or may be shot out of the tool accidentally causing serious injury.

To prevent injury from a flying chisel:

- Always use a retainer.
- Inspect the retainer for wear or damage regularly.

- Be aware that the chisel may break during operation.
- Never trigger a hammer unless held against a work piece.
- Remove chisel, die or punch from tool when work is over.
- When finishing a job, disconnect the tool from its air supply.
- Before changing accessories, chisel or die – disconnect the tool from the air supply.

- ② Chips and sparks should be prevented from striking an eye or another worker.

To prevent vision loss:

- Always wear eye protection.
- Isolate work of this kind by using barriers between work stations.
- Do not use the tool for other purposes than it is intended for.

- ③ Gloves protect fingers from pinching, scuffing and scraping.

- Protective shoes may prevent your feet from being injured.

- ④ Explosive atmosphere must not be ignited.

To prevent injury and property loss from fires:

- Use other technique.
- Use accessories of non sparking material (e.g. needle attachment of Beryllium copper for a needle scaler).

- ⑤ Electric shock may be fatal.

- Avoid chiseling into electric wiring hidden inside walls etc.

LONG TERM RISKS

- ⑥ Always use ear protection.

To prevent gradual loss of hearing due to exposure to high noise level – wear ear protection.

- ⑦ Vibration may be harmful to hands and arms.

- Use vibration damped tools if available.
- Reduce the total time of exposure to vibrations, particularly if the operator has to guide the chisel by hand.

- ⑧ Dust generated during operation may be harmful.

- Use spot suction or a breathing apparatus.

PROPER USE AND MAINTENANCE

- ⑨ Do not perform idle blows with a hammer.

- They will cause high internal stresses and shorten the life of the tool.
- Note the risk of shooting out the chisel, die or punch if the retainer is not in order or damaged.

- ⑩ Quick coupling.

- If a coupling is used on a percussive tool, it should be separated from the tool by a whip hose (length 0.5 m).

- ⑪ Follow the tool manual and the lubrication instructions.

- ⑫ Perform overhauls at regular intervals.

Vibration-damped and Silenced

Chipping Hammers

- RRF21/31** have a sturdy D-handle in light metal alloy for a high power-to-weight ratio and steady grip. The compact, vibration-controlled design offers good accessibility and ease of use.
- RRD37/57** are light, quiet and have a long service life. They have light alloy tool casings, low vibration and noise levels, vibration damping in both hand grips, and piped away exhaust.

Chipping Hammers

- Dependable** – Their robust construction makes them highly dependable.
- Efficient** – RRC65 and RRC75 have a blow rate which makes them particularly suitable for roughening.
- Chisel retainer** – for safer jobs – RRC22-RRC75 are delivered with a chisel retainer as standard. For the same reason choose a tool that can be guided via the machine itself and not by holding the chisel.

Atlas Copco chipping hammers of series RRC are delivered with a standard, guided ISO hexagon nozzle (-01) or a round, non guided shank nozzle (-02).

RVM07B is the obvious choice for task such as weld dressing light concrete trimming and for removal of paint and rust.

- **Vibration-damped with low-noise level.**
- **Two-job capacity** – RVM07B features a clean-blowing device which is very useful in order to keep the work piece clean from slagg and other particles from the process.

RVM07B

Choose between two different models for heavy slag chipping and for instant trimming of concrete.

- **High removal rate** – RRC13 is very effective and has a high removal rate in relation to its low weight.
- **Well proven** percussive mechanism and retainer.
- **Two-job capacity** – RRC13B with extra clean-blowing device.
- **Improved back head** – Throttle valve and lever with really Heavy Duty performance for long service life. Clean blowing system with twice the previous blow

RRC13B

capacity. Big blow button for easy operation and sturdy valve stem to resist rough handling.

Needle Scaler

The effective needle scaler, RRC13N, is based on the same fundamental design as the straight chipping hammers of type RRC13.

- **Sturdy design** – Easy to maintain.
- **Versatile** – The needle scaler is used to remove welding slag, rust and paint from steel structures.

Introduction – Riveting Systems

Minimum vibration, maximum productivity

Atlas Copco's top-of-the-line riveting systems are designed to minimize the riveter's exposure to vibration, while maintaining high tool performance. The RRH recoilless riveting hammer has an air cushion behind the hammer piston which efficiently kills vibrations. The same air dampening technique is used in RBB bucking bars. It raises individual productivity and boosts output in your plant.

The Atlas Copco riveting system includes vibration-damped hammers RRH and bucking bars RBB – as well as conventional riveting hammers RRN.

The vibration-damped riveting hammers – RRH – are available in different sizes.

Each size is available in "Trigger start" and "Push to start" models.

The conventional riveting hammer – RRN – is available in one size: RRN11P.

Critical Factors

The number of blows and the power are critical factors which determine the strength of a riveted joint. A few powerful blows are needed to fill out the hole and form a head when upsetting the rivet. The impact force is critical to some extent when working with aluminum alloys, as too many blows can embrittle the metal.

In terms of capacity, the tools overlap. The selection guide below helps you to find the right tool for your particular application of riveting.

The vibration-damped bucking bars RBB are available in two versions – the simple spring damped – SP type and the air servo assisted SA type.

Selection Guide

Hammer model ^a	Nominal Max. Rivet Diameter Capacity						Bucking bar model required ^b	
	Dural		Steel		Titanium			
	mm	in	mm	in	mm	in		
RRN11	2-5	3/32 - 3/16	1-4	3/32 - 5/32				
RRH04	2-5	3/32 - 3/16	1-4	3/21 - 5/32			RBB04	
RRH06	4-7	5/32 - 1/4	3-6	1/8 - 1/4	2-4	3/32 - 5/32		
RRH08	5-8	3/16 - 5/16	4-7	5/32 - 1/4	3-6	1/8 - 1/4		
RRH10	5-9	3/16 - 3/8	6-8	1/4 - 5/16	4-7	5/32 - 1/4		
RRH12	8-11	5/16 - 7/16	7-10	1/4 - 3/8	6-9	1/4 - 3/8		
RRH14	11-13	7/16 - 1/2	9-12	3/8 - 15/32	8-11	5/16 - 7/16		

^a Hammer capacity depends on direct/indirect riveting as well as Panel density and stiffness.

^b Bucking bar capacity is dependent on dolly weight.

Vibration-damped

Riveting Hammers

RRH is a unique series of riveting hammers incorporating completely revolutionary ergonomic advantages.

- **Versatile** – RRH can easily cope with rivets in diameters up to 13 mm.
- **Vibration-damped system** – The RRH vibration-damped riveting hammer, combined with the RBB vibration-damped bucking bar, offer an unbeatable system for riveting.
- **Adjustable power**.
- **Adjustable hand guard** – Support hand grip is vibration-damped.
- Now new models with trigger start for excellent handling. Pistol grip with rubber coating.

-01 means 10 mm short shank rivet set.

-02 means 10.2 mm short shank rivet set.

-12 means 10.2 mm stand shank rivet set.

Conventional Type

Riveting Hammers

For riveting in confined spaces we recommend our RRN11 riveting hammer.

- **RRN11** – is the smallest riveting hammer available on the market, with unique accessibility.
- **Adjustable** – The RRN11 has a built-in adjustment knob with which you can set the power for different rivet materials and sizes.
- **Controllable** – The trigger is easily operated and provides excellent control.

An efficient riveting system consists of vibration-damped bucking bars together with vibration-damped riveting hammers.

- Cramped spaces** – Mini bucking bars RBB04SP are ideal for work in confined spaces. The large mass types -04, -05 will in most applications set the rivet faster than the smaller models.

Reliable, productive and comfortable to work with

The handheld drills in Atlas Copco's wide range are of the highest quality and built to provide consistent reliability and performance in a wide range of applications. Their advanced ergonomic designs make your job easier, safer and more efficient.

From the time our first drill was produced in 1901, Atlas Copco has demonstrated a genuine understanding of customer needs. Our drills have evolved to meet changing customer demands over the years. Whatever the job, Atlas Copco has a drill to match your exact requirements.

RELIABLE

When you pick up an Atlas Copco drill, you can be confident that it will do the job over and over again.

POWERFULLY PRODUCTIVE

Despite their compact designs, our drills consistently deliver all the power you need. Their high power-to-weight ratio ensures maximum material removal in the shortest possible time.

ERGONOMIC

Thanks to 50 years of focusing on ergonomics, Atlas Copco drills fit comfortably in your hand. Grips are anatomically shaped to keep your arm and wrist straight, reducing the risk of injury during

long-term use. The light weight and perfect balance of each drill enables you to guide it smoothly and easily. Low noise and vibration levels make the tools comfortable to work with all day long.

DURABLE, LOW MAINTENANCE

The rugged, lubrication-free designs of our drills can withstand the toughest industrial situations and go on working day in, day out. Maintenance requirements are low.

QUALITY THROUGHOUT THE TOOLS' LIFE-CYCLE

Atlas Copco stands for quality, from the manufacture of critical drill components, through production and sales, to service and support throughout the tools' long life-cycle.

Selection Guide

The speed for a specific drilling operation should be chosen on the basis of the material in the workpiece and the diameter of the hole.

In the selection guide, you will find proposals for suitable free speeds for selection of the correct tool.

Please use the information below as a guide only. Many variables contribute to the optimal speed choice for a specific application.

Cutting speed ^a m/min	Material			Drill dimension in mm	rpm																								
		300	400	500	600	700	800	1000	1200	1300	1500	1700	1900	2200	2400	2600	2900	3000	3300	3700	3800	4500	5500	6000	6400	6500	20000	23000	26000

^a Remember that, if the speed is too low the cycle time increases.

Regardless of which model you choose, you'll get a product with superior ergonomics and productivity.

- Quiet – Very low noise level.
- Comfortable grip – For high precision.
- Two-hand grip available – Gives even greater flexibility.
- Lubrication-free – For clean working environment and operator comfort.

Atlas Copco straight drills are primarily intended for vertical drilling operations and for drilling in cramped spaces.

- Quiet – Very low noise level.
- Very high power to weight ratio.
- Adjustable exhaust –The exhaust air is directed away from the operator.
- Lubrication-free – LBB16 drills are lubrication-free for clean working environment and operator comfort.

The LBD16M and LBP16M are designed with the operator in focus. A lightweight tool with a powerful air motor combined with interchangeable angle heads equals excellent flexibility in any handheld drilling operation. Swap to a new head in a matter of seconds with the easy-to-use quick change mechanism. With the LBD16M and LBP16M, you are always ready to take on any job in ever changing drilling applications.

- Quick change system – Easy-to-use and robust quick change design for high durability.
- Indexable head – The head can be positioned in any direction for maximum accessibility.
- High power lubrication free motor – No more oil aerosols, for a safer and cleaner working environment.

Service Kits

The Atlas Copco LBS36 drill is equipped with an integrated micro stop. It is designed for the aerospace industry where the focus is on high-precision drilling, reaming and countersinking.

- Accurate – The integrated micro stop function makes the LBS36 unique for high-precision drilling of rivet holes and other fasteners. Minimized spindle run-out is achieved by eliminating standard drill chuck.
- Ergonomic handle design – The integrated micro stop function makes the tool shorter and lighter in weight.
- Flexible – Can be used for drilling, reaming, countersinking and, in certain applications, a combined operation using a form bit.
- Dust extraction – Equipped with a specially designed spot suction system for working in composite materials.
- Lubrication-free – For clean working environment and operator comfort.

Atlas Copco tappers are designed for tapping and thread-cleaning operations with thread taps. The tools are fitted with a tap chuck as standard.

- Comfortable and effective – The ergonomically designed handle gives a comfortable grip and maximum performance.
- Higher productivity – Double speed when you withdraw the machine.
- Low noise level – Rear-directed exhaust gives a lower noise level.
- Lubrication-free – For a clean working environment and operator comfort.
- Quick change system – Upgrade your old tool, or order a new one with this system. Various tap holders can be used to change a broken tap or to change to a different tap size.
- Lower cost – The efficient air motor, together with interchangeable components from our standard drills, cut your costs.

Robust and versatile, the PFD-drills are your best choice for holemaking

PRODUCTIVITY

With this platform you have all you need for hole preparation. Reduce cycle time and increase output with a powerful turbine motor. This robust tool is well suited for factory environment and the long service intervals maximizes uptime of your investments.

HOLE QUALITY

Keep your workplace clean with Atlas Copco's ChipLet® feature which makes chips easy to evacuate. With ChipLet® during countersinking, you have a one-step process. Giving process improvements in terms of both productivity and quality.

ERGONOMICS

My operators will really appreciate how all the controls on the tool are grouped in one and the same place. This reduces the risk of operator errors. The tool is also very well balanced which makes it easy to move around.

SAFE OPERATION

The modular design means fewer back-up tools. You can also save on service as the platform is based on standard, reusable components.

SUPPORT

The modular approach means quick deliveries when needed, and makes it easy to re-work your existing products when urgent applications come up. With our technical documentation and support you will quickly put new tools to work on your assembly line.

Mandrel-CC-25.4-A	4141 0806 28
Collet-CC-1	4141 0813 28

Example: Concentric collet model with inboard lubricator, counter and ChipLet®. Spindle with M6 interface, speed of 2600 rpm and feed of 0.07 mm/r (0.003 IPR). Suitable for drill and countersink of Ø 6.35 (1/4") holes in Al or Al/CFRP stacks.

- (A) Optional ChipLet® module which effectively breaks chips while drilling for improved chip evacuation and hole quality.
- (B) Angle head with superior durability with double needle bearings for both feed and drive gear.
- (C) Overload clutch protects the angle head and drive train from overthrust.
- (D) The replaceable feed cassette system enables quick and easy change of feed rate.
- (E) Optional indexer which allows the tool to be locked in the jig also when free space is compromised.
- (F) High torque, high power governed air motor maintains cutting speed while drilling.
- (G) Easy-to-change split gearbox for quick adjustment of rpm.

- (H) Emergency stop fully compliant with the European machinery directive for a high level of safety.
- (J) Rapid advance of spindle reduces cycle time and makes setup a quick and safe task.
- (K) Reliable and user-friendly tool controls with optional cycle counter.
- (L) Best in class spindle power and thrust capabilities. A wide range of speeds and feeds.
- (M) A large selection of tool noses with or without vacuum port makes the tool fit existing drill jigs.
- (N) Concentric collet foot which allows clamp force for countersinking up to diameter 22 mm (7/8"). Debris protection and efficient vacuum exhaust of chips. Foot is modular and easily removed for drill bit change.

Ensure the full potential of your pneumatic tools

To ensure that you benefit from the full potential power of your tools, Atlas Copco has developed a full range of air line infrastructure products to be used with pneumatic tools and equipment.

PRODUCTIVITY

By using Atlas Copco's air line infrastructure products and accessories you ensure that you have a correct air line installation for your tool. This will provide the correct air flow to the tool, ensuring that you benefit from its full potential power, and that you reach the correct torque in torque-controlled tools. By using the recommended installation you will also minimize the service requirements of the tool.

ENERGY EFFICIENCY

With a correct installation you will not only achieve the tool's full potential power, you will also reduce energy costs. All Atlas Copco products and accessories are designed for minimum pressure drop, which ensures that the compressor is not "working overtime".

SAFETY

All products and accessories are designed to meet the highest demands for a safe working environment. Atlas Copco has developed a wide range of safety couplings and hose reels to meet today's high standards in terms of workplace safety.

QUALITY

All Atlas Copco products and accessories are made of the highest quality materials for long production cycles and to withstand rough treatment. Choose Atlas Copco and you will be sure of high quality products.

All local safety regulations with respect to installation, operation and overhaul must always be followed. Please read the separate instructions regarding safety which are supplied with all products in order to improve your own safety!

BALL VALVE

- Switch off the compressed air with the ball valve when you are not working (see fig. 1).
- Open all ball valves gently in order to discover improperly tightened devices (see fig. 5).

AIR PREPARATION UNITS

- Please check for solvents which change the structure of polycarbonate^a bowls.

These solvents make the polycarbonate brittle so it can break. Normally polycarbonate is not easy to break. If you need to use aggressive solvents, please contact us and we will help you choose the right equipment.

- Use bowl guard.

An easy way to eliminate this type of accident is to use a bowl guard on MINI and MIDI units. The MAXI unit has an aluminum bowl with a new, more chemical resistant plastic on the inside as standard.

Check that the bowls are properly tightened and that all units are fitted together before switching on the compressed air with the ball valve.

QUICK SAFETY COUPLINGS

To increase the safety and reduce the risk of operator injuries we recommend you to always buy couplings with a safety function. Couplings with a safety function are disconnected in

two stages in order to vent the coupling and minimize the risk of sudden component separation, which has the potential to cause operator injury.

Never open a quick coupling with a screwdriver in order to ventilate the air.

CLAW COUPLINGS

- Be very careful (see fig. 1+2+3).

They are always open and must be used very carefully. To increase safety when using claw couplings, we recommend the claw LNH claw coupling with a lock nut.

CLAMPS AND CONNECTIONS

- Avoid screwdrivers when tightening.

Check that they are properly tightened. Avoid screwdrivers when tightening, they can easily slip and damage your hand. Use a wrench. If you need to use a screwdriver, mount the clamp in a vice.

HOSES

When mounting hoses on hose connections, use water and soap in order to make the hose slip on to the connection. Do not use oil. Water and soap will dry up. Remove leaking hoses. A small leakage can quickly become a large hole.

BLOW GUNS

- Use the safety version. It eliminates the risk of air at high pressure coming into direct contact with skin.

^a Polycarbonate has good chemical resistance to all solvents except chemicals containing acetone, benzol, glycerine, some hydraulic and synthetic oils, chloroform, methyl alcohol, carbon tetrachloride (and similar solvents), carbon disulphide, perchloroethylene, toluene, trichloroethylene, xylene (nitrocellulose, thinner), acetic acid.

FOLLOW THIS ORDER WHEN WORKING WITH CLAW COUPLINGS.

How to open a claw coupling:

- ① Close the ball valve.

④ How to close a claw coupling:

Make sure that the two claw couplings are mounted together.

Use claw couplings with lock nut (LNH) or use a lock spring for safer locking.

- ② Run the tool so the air ventilates out.

- ⑤ Open the ball valve gently.

- ③ Release the claw coupling.

Saving your tooling investment

Being global solution providers of tooling, compressors, vacuum solutions, etc. We at Atlas Copco would like to assist you, our customer's in achieving the maximum productivity out of your tool. We know that a well-designed air network can reduce your air leakage cost, enhance the performance of your tool, lead to greater productivity, energy efficient and in turn less down time.

Atlas Copco air preparation units, such as filters, regulators and lubricators, enable your tools to run at optimal levels, hence reducing downtime and increasing productivity. The filter ensures compressed air comes cleaner to the tool without any partials that might affect the performance of your tool in an adverse way, the regulator helps maintain a stable dynamic pressure and the lubricator helps to oil the tool in a controlled way.

FILTER – (F)

Separating water and solid particles from the airline and compressor. Using filters results in higher quality air, you ensure longer service intervals, improved efficiency. Based on the centrifugal phenomena, gravity and centrifugal force, remove the heavy water partials resulting in minimum contamination of the tools motor and body from dirt partials.

Atlas Copco filters separate up to 98% of the water when operating within the design working range. With auto drainage the bowl is emptied when the accumulated water reaches a certain level.

REGULATOR – REG*

Airline regulators used for natural gases and compressed air with built in lockable setting knobs are used to supply a constant flow of air to as required to maintain the efficiency of the tool being used.

The air pressure regulator ensures that the pre-set working pressure remains constant regardless of pressure variations in the intake air and minor variations in the air flow rate. By preventing unnecessary consumption of air, the air pressure regulator improves overall operating economy. Regulators are used to provide consistent air pressure to the tool at all times and to prevent minor air flow fluctuations that can affect the performance of the tool.

LUBRICATOR – DIM

Lubrication for more power and longer lifetime of the tool, lubrication is essential to prolong the life of the vane in the tool motor (unless stated otherwise). The life of the vanes may decrease to as little as 1/10th of the normal working time. Tests in Atlas Copco laboratories

Showed that the power output of a grinder decreases by 15-20% after 20 minutes when not lubricated. With the use of a lubricator you will prolong the lifetime of a vane motor up to three times and the motor will work much more efficiently, and with less friction.

F/R units are combined filter / regulators assembled together. F/R units are recommended in every case where both filters and regulators are needed. Filtering and regulating and lubricating properties are almost the same as for individual units.

Filter – FIL

Regulator – REG

Lubricator – DIM

*(1 bar pressure drop from 6.3 bar means 20% lost efficiency)

Air preparation unit MINI-Range main application is to prepare the air for pneumatic components. MINI units have a 1/4" BSP connection thread, are ideal for small tooling applications.

WORKING TEMPERATURE

-10°C to 50°C

MAX WORKING PRESSURE

10 bar (232 psi)

DESCRIPTION

Sinter filter centrifugal principle, diaphragm-type pressure with relieving feature, lubricator with automatic oil filling.

MEDIUM

Compressed air and neutral gases

SUPPLY PRESSURE

1.5 - 16 Bar at inlet

0.5 - 10 Bar at outlet

FILTER ELEMENT

5µm

Model	Maximum air flow l/s	Bowl material	Filter condensate drainage	Max condensate capacity cm³	Max oil capacity cm³	Weight kg	Ordering No.
Filters							
MINI-FIL-1/4-BSP	37	Plastic, PC with PA bowl guard	Automatic	10	-	0.28	4221 0001 31

MINI-F/R-1/4-BSP	34	Plastic, PC with PA bowl guard	Automatic	10	-	0.48	4221 0001 55
Filter/regulator+lubricator							
MINI-FRL-1/4-BSP	29	Plastic, PC with PA bowl guard	Automatic	10	40	0.78	4221 0001 63

NOTE: All separate units, mounting brackets, assembly kits and pressure gauges need to be ordered separately. MINI-F/R-1/4-BSP and MINI-FRL-1/4-BSP are delivered with gauge.

The MIDI Range is suitable for more than 90% of the Atlas Copco tool range and is the best choice for assembly tools, percussive tools, drills, nibblers and grinders up to Turbo. The MIDI has a 1/2" BSP connection thread and a housing and bowl of high-tech polymer.

WORKING TEMPERATURE

-10 °C to 50°C

NOTE: For dry compressed air, ice formation must be avoided.

DESCRIPTION

Sinter filter centrifugal principle, diaphragm-type pressure with relieving feature, lubricator with automatic oil filling.

MEDIUM

Compressed air, neutral gases

SUPPLY PRESSURE

1.5 to 16 Bar at inlet

0.5 - 10 Bar at outlet

FILTER ELEMENT

AIR TOOL OIL

Atlas Copco air tool oil is a white, oil based lubricant for pneumatic tools. It has excellent antiwear properties and contains additives preventing oxidation and foaming. Optimizer air tool oil provides a better working environment, compared to conventional mist lubrication oils and is recommended when stringent demands are placed on the working environment.

- Provides a better working environment.
- Excellent antiwear properties.
- Minimizes wear on components.

Optimizer 1 liter	9090 0000 04
Optimizer 4 liter	9090 0000 06

SINGLE POINT LUBRICATOR DOSOL

Accurate lubrication for tools in intermittent service.

The Atlas Copco DOSOL system for direct lubrication is based on an injector pump which meters out the oil in exact doses, actuated by pulses of compressed air. The oil dosage can be regulated from a fraction of a drop to a full drop.

- **Exact amount** – Precision injector, adjustable for exact amount of oil.
- **Oil directly at the tool** – The oil is conveyed through a capillary tube directly to the lubrication point.

A single-point lubricator (SPL) consists of an injector pump fitted to a valve body, converting interruptions in compressed air flow into pulses. In the majority of cases, an oil bowl is fitted on each lubricator.

Every DOSOL SPL unit can be finely tuned to inject from 1 to 1/10 of a drop of oil in 40 steps (30 to 3 mm³). Every DOSOL SPL unit includes as standard a counter with a switch that allows the lubricator to operate every first, fifth or tenth tool cycle.

The adjusting knob features a positive stop at both maximum and minimum settings, which means that a zero setting is not possible.

The preset quantity of oil is supplied to the tool through a small-bore nylon tube inside the air hose. 7.5 m of oil-filled nylon tubing is included as standard.

MULTIPLE-POINT LUBRICATOR DOSOL

For supplying lubricant to an unlimited number of lubrication points on a machine or in a pneumatic system.

The DOSOL multiple-point lubricator (MPL) consists of a number of JECT 01 oil metering pumps assembled into a "package" with a common BASE baseplate. A stack may contain up to ten JECT 01 units. Several such assemblies may be used together.

- All oil pumps are supplied with oil via the BASE from an oil container or central oil reservoir. A line for pneumatic signals from the equipment to be lubricated is also connected to the BASE.
- The lubricant is conveyed through small-bore nylon tubing which should be ended with check valves.
- With the TEN counter the lubricator can be actuated every first, fifth or tenth tool cycle.

Every DOSOL MPL unit can be finely tuned to inject from 1 to 1/10 drop of oil in 40 steps (30 to 3 mm³). This helps to minimize the oil dose. The adjusting knob features a positive stop at both maximum and minimum settings, which means that zero setting is not possible.

SINGLE-POINT LUBRICATOR, DOS

Model	Connection thread BSP in	Air flow l/s		Working pressure bar		Temperature range °C		Ordering No.

^a At 6 bar and DP = 0.2 bar.

^b With counter and 7.5 m oil-filled nylon tubing.

^c With 0.3 l oil container counter and 7.5 m oil-filled nylon tubing.

Optional Accessories

FOR SINGLE POINT LUBRICATOR DOSOL

Designation	Ordering No.
Nylon tubing 3.2 mm outside diameter	
7.5 m, oil-filled	9090 1418 00
7.5 m, without oil	9090 1419 00
100 m, with oil	9090 1420 00
Barbed nipple for joining of 3.2 mm tubes	9090 1423 00
Check valve for outer end of nylon tubing, dia ext. 3.2 mm	9090 2050 00

FOR MULTI POINT LUBRICATOR DOSOL

MULTIPLE-POINT LUBRICATOR, BASE, JECT 01

Designation	BSP in	Ordering No.
BASE baseplate		
Plate	Oil port 1/4	8202 4205 04
Clamp	Air port 1/4	
Oil port 1/4		
Air port 1/4		
JECT 01 oil pump	Oil delivery port 1/8	8202 4203 10

TEN-counter

When lubricating equipment with a very low air consumption or very short time in operation it may be difficult to set a sufficiently small dose of oil. In such cases a counter is connected underneath the base plate BASE. The oil pumps will then be actuated only on each, every fifth or every tenth air pulse. The air signal is connected to the clamp underneath the counter.

Ordering No. 8202 4206 03

Side-ported air block kit

If all pumps are not to be actuated simultaneously, a signal block is installed between the oil pumps in the stack. The pumps below the signal block will then be actuated via the base plate BASE and those above it from a separate signal via the signal block.

Ordering No. 8202 4206 03

NOTE: When the counter TEN is used in MPL installations an intermediate, black plastic part is used (supplied with all TEN counters) between BASE and TEN.

Introduction – Quick Couplings

Ensure the highest air flow and lowest pressure drop of your pneumatic tools

Whenever tools or pneumatic equipment need to be changed, or you need to make quick connections of hoses to an air outlet, Atlas Copco couplings are the energy efficient and high productivity choice.

ENERGY EFFICIENCY

All Atlas Copco couplings are designed to ensure minimum pressure drop and thus reduce energy consumption.

PRODUCTIVITY

Exceptionally high air flow ensures full power to your tools.

QUALITY

Atlas Copco couplings are light and compact and the bodies are made of hardened steel, which provides long life in the toughest applications.

ERGONOMICS

The couplings from Atlas Copco features compact dimensions and low weight for the operator.

SAFETY

ErgoQIC and SmartQIC are vented safety versions to minimize the risk of sudden component separation and sound bang. The safety features are according to EN 983 and ISO 4414.

THE RANGE

Atlas Copco offers four product groups of quick couplings in many international standards:

- ErgoQIC - full flow coupling.
- SmartQIC - Safety vented coupling.
- QIC - Entry level coupling.
- Claw - High flow and durable coupling.

ERGOQIC

The ErgoQIC coupling is a ball valve coupling with a safety feature offering a higher flow than ordinary coupling systems. The ErgoQIC is a strong and durable full flow quick coupling with no air restriction inside the coupling. It is suitable for assembly tools, drills and grinders. Upgrading any air system with ErgoQIC will give the benefits of productivity and energy efficiency. ErgoQIC is designed to minimize the risk of sudden component separation and sound bang. The safety features are according to EN 983 and ISO 4414. It is made of hardened steel.

The ErgoQIC disconnects in two steps; first you push in and bend slowly – the pressurized air hose will then vent, and as a second step you can disconnect without risk of harming the operator.

SMARTQIC

SMARTQIC is the latest generation of pneumatic safety couplings and nipples. The couplings offers high flow and low pressure drop with innovative safety features. The design has a unique safety venting feature when disconnecting, thus minimizing risk of injury to the operator.

Durable and tough, the couplings are made out of zinc-plated steel/brass material and the entire product range complies with safety standards ISO 4414 and EN 983. SMARTQIC couplings also complies with OSHA 1910.95.

Suitable for many types of applications and pneumatic tools; such as screwdrivers, assembly tools, drills and grinders.

CLAW

CLAW couplings are made from drop-forged, hardened steel which can withstand rough treatment and ensures a long life even under difficult conditions. The coupling head is the same for all hose sizes, which can therefore be freely combined. The recommended maximum working pressure is 10 bar.

MULTIFLEX SWIVEL

MultiFlex Swivel is a multi-directional connector. Once the tool is connected the hose will stay in the ideal position however much the operator and the tool move around. The MultiFlex bends and rotates 360° in all directions while the hose stays straight.

HOWTO...

NOTE: Most Atlas Copco tools come with a female thread, please check the tread before choosing your coupling and nipple selection.
Same selection process can be used for all couplings e.g. SmartQic ; ErgoQic, etc..

ErgoQIC 08

ATLAS COPCO GLOBAL STANDARD

The ErgoQIC 08 is a full flow quick coupling with no air restriction inside the coupling. It is suitable for assembly tools, drills and small grinders. Upgrading any air system with ErgoQIC 08 will give the benefits of productivity and energy efficiency.

- Full flow coupling.
- Ergonomic design, small size and low weight.
- Strong and durable.
- Safety feature according to EN 983 / ISO 4414.
- Protective rubber cover available.
- Main market: Global.

ErgoQIC 10

ATLAS COPCO GLOBAL STANDARD

The ErgoQIC 10 is a full flow coupling with no air restriction inside the coupling. It is suitable for assembly tools, drills and grinders. Upgrading any air system with ErgoQIC 10 will give the benefits of productivity and energy efficiency.

- Extreme full flow coupling.
- Strong and durable.
- Minimized connection force.
- Safety feature according to EN 983 / ISO 4414.
- Protective rubber cover available.
- Main market: Global.

ErgoQIC 08E

EURO STANDARD 7.6 (7.4)

The ErgoQIC 08E is a full flow quick coupling with no air restriction inside the coupling. It is suitable for assembly tools, drills and small grinders. Upgrading any air system using Eurostandard nipples with ErgoQIC 08E couplings will give the benefits of productivity and energy efficiency.

- Full flow coupling.
- Ergonomic design, small size and low weight.
- Strong and durable.
- Safety feature according to EN 983 / ISO 4414.
- Protective rubber cover available.
- Main market: Europe.

Atlas Copco SmartQIC 08E

EURO STANDARD 7.6 (7.4)

Safety coupling with venting connection, high flow and low pressure drop.

Common standard used in EU-markets for many types of assembly and material removal tools.

- High reliability with low pressure drop.
- Safety function with vented connectione.
- High durability and easy handling.
- High air flow and increased productivity.
- Minimizes hose whip and injuries to operator.
- Long life time.
- Safety feature according to ISO-standard 4414 and EN 983.
- Complies with OSHA 1910.95.
- Main market: Europe.

ErgoQIC 15US

ISO 6150-B / US STANDARD

The ErgoQIC 15US is a full flow coupling with no air restriction inside the coupling suitable for large air consuming assembly tools, drills and grinders. Upgrading any air system with ErgoQIC 15US will give the benefit of productivity and energy efficiency. It is interchangeable with US 1/2" standard nipples.

- Extreme full flow coupling.
- Strong and durable.
- Minimized connection force.
- Safety feature according to EN 983 / ISO 4414.
- Main market: North America, France, Norway and Spain.

Atlas Copco SmartQIC 15US

ISO 6150-B / US STANDARD

Safety coupling with venting connection, high flow and low pressure drop.

- High reliability with low pressure drop.
- Safety function with vented connection.
- High durability and easy handling.
- High air flow and increased productivity.
- Minimizes hose whip and injuries to operator.
- Long life time.
- Safety feature according to ISO-standard 4414 and EN 983.
- Main market: North America, France, Norway and Spain.

CLAW couplings are made from drop-forged, hardened steel which can withstand rough treatment and ensures a long life even under difficult conditions. The coupling head is the same for all sizes, which can therefore be freely combined.

The recommended maximum working pressure is 10 bar.

- Large bore – machined surfaces give low air resistance and minimum pressure drop.
- Robust claws – will withstand rough handling without deformation.
- Locking lugs – precision-made to provide a reliable lock.
- Special rubber packings – resistant to oil and temperature changes. Max. temperature 80°C (176°F).
- Packing seats – lathe-turned grooves ensure a leak-proof seal.
- Couplings are zinc-plated and thus effectively treated against corrosion.
- Available with extra protective cover.

BAL AND BAL-1A

The Atlas Copco valves BAL and BAL-1A are both suitable for air, water and many other liquids and gases due to the choice of material.

- Silicone-free grease – Both are lubricated with silicone-free grease which is important when spray-painting.
- Maximum through flow – Full bore valve to DIN standards.
- Housing and ball made of chrome-plated hot-stamped brass MS 58.
- Handle of enamelled aluminum.

**BAL – WITH NITRILE RUBBER SEALS**

BAL valves can be used in all settings between fully open and fully closed.

The balls and the seals can be replaced without the body being removed from the piping.

BAL-1A – WITH TEFLON SEALS

Intended for operating either fully open or fully closed.

MULTIFLEX SWIVEL

MULTI-DIRECTIONAL CONNECTOR

The MultiFlex swivel is an ingenious multi-directional connector. Connect your tool and the hose will stay in the ideal position however much you and the tool move around. The MultiFlex bends and rotates 360° in all directions while the hose stays straight. It takes the effort out of working in those cramped spaces. What's more, the hose feels almost weightless and it reduces hose wear. It's the magic of MultiFlex – a marriage of ergonomic thinking and ingenious design.

- Ergonomic.
- Reduces hose wear.
- High flow capacity.
- Minimum pressure drop.
- Strong and durable.
- Available with rubber (EPDM) protective cover.
- Fits most pneumatic tools.

Pressure drop diagram for straight hoses

This diagram helps you to choose the right hose according to the air consumption of the tool and the length of the hose. The purpose of the diagram is to ensure that the pressure drop in the hoses does not exceed 0.2 bar.

HOW TO READ THE DIAGRAM:

Look up the tools required air consumption at 6 bar.

Use this value in the diagram.

What length of hose do you need?

Look at the diagram to see which hose size you need.

Decide which type of hose you need, Atlas Copco Tools has seven different hoses covering all types of needs for pneumatic hand tools.

EXAMPLE

The tool has an air consumption of 10 l/s and the application requires a hose length of 7 m. These two values have a cross point slightly under the 10 mm size hose (7 m of 10 mm hose gives a value of approximately 11 l/s).

Therefore a 10 mm hose will be suitable.

PRESSURE DROP DIAGRAM FOR HOSES

Internal hose diameter (mm)

CABLAIR HOSES**SUPER-LIGHT FLEXIBLE PVC-HOSE**

Cabair is made of high-strength, high performance PVC compound. The Cabair hose weighs 30-50% less and is much softer and more flexible than conventional PVC hoses. This ensures complete freedom of movement for operators of pneumatic hand tools.

- Low weight.
- Extremely soft and flexible.
- Silicone free.
- Ergonomic.
- Working temperature -15°C to +60°C.

Model	Hose inside dia		Hose outside dia mm	Max working pressure ^a bar	Max rec. air flow ^b l/s	Weight per 30 m coil kg	Ordering No.
	mm	in					
CABLAIR 06	6	1/4	8.5	14	4	1.2	9093 0035 11
CABLAIR 08	8	1/3	11	14	7.5	1.7	9093 0035 41
CABLAIR 10	10	2/5	13	12	13	2.1	9093 0035 71

CABLAIR 25	25	1	31.5	7	125	10.4	9093 0036 91

^a With a safety factor of 3 at 20°C (at the max temp of +60°C the working pressure should be reduced by 50%).

^b The pressure drop will be 0.2 bar on a hose length of 5 m.

CABLAIR ESD**EXTRA FLEXIBLE ANTISTATIC AIR HOSE**

Cabair ESD is designed specifically for use within the computer manufacturing industry. The hose possesses properties which enable ESDS (electrostatic sensitive devices) to be handled in a protected area with a low risk level, as a result of electrostatic discharge. In addition to a known demand in the computer industry, it is expected that potential exists in the electronics, radio and communication fields. The connection device must be earthed/grounded.

- Extra flexible.
- Antistatic.
- Silicone free.
- Testing in accordance with BS2050:1978 (1998) 4.12.
- Working temperature -15°C to +60°C.

Model	Hose inside dia		Hose outside dia mm	Max working pressure ^a bar	Max rec. air flow ^b l/s	Weight per 30 m coil kg	Ordering No.
	mm	in

CABLAIR ESD 13	13	1/2	18	23/32	7	21	4.41

^a With a safety factor of 3 at 20°C (at the max temp of +60°C the working pressure should be reduced by 50%).

PVC HOSES

STRONG PVC HOSE FOR HEAVY-DUTY APPLICATIONS

PVC hose has high resistance to abrasion, which makes it the ideal hose for tough working environments such as workshops, factories, garages, etc. It is mainly recommended for indoor use.

- Long service life.
- Pliable.
- Transparent.
- Working temperature -15°C to +60°C.

Model	Hose inside dia		Hose outside dia mm	Max working pressure ^a bar	Max rec. air flow ^b l/s	Weight per 30 m coil kg	Ordering No.
	mm	in

PVC 25	25	1	32	10	125	12.5	9093 0039 61

^a With a safety factor of 3 at 20°C (at the max temp of +60°C the working pressure should be reduced by 50%).

^b The pressure drop will be 0.2 bar on a hose length of 5 m.

POLUR

HIGH RESISTANT POLYURETHANE HOSE

Polur hose is the most environmentally friendly solution. It has high resistance to abrasion and it is oil resistant. Polur hose has a much longer lifetime than PVC hoses. Polur is ideal in tough working conditions such as workshops, factories, garages, shipyards and construction sites due to its flexibility, even at minus degrees. Polur is recommended for indoor and outdoor use.

- Oil resistant.
- Flexible.
- Long service life.
- Working temperature -30°C to +60°C.

Model	Hose inside dia		Hose outside dia mm	Max working pressure ^a bar	Max rec. air flow ^b l/s	Weight per 25 m coil kg	Ordering No.

POLUR 13	13	1/2	18	13	21	4.0	8202 0603 13

^a With a safety factor of 3 at 20°C (at the max temp of +60°C the working pressure should be reduced by 50%).

^b The pressure drop will be 0.2 bar on a hose length of 5 m, including 2 nipples and at an inlet pressure of 7 bar.

TURBO**SUPER-LIGHT FLEXIBLE RUBBER HOSE**

Turbo hose has been developed for flexible use both indoor and outdoor. The hose weighs 30-40% less than conventional rubber hoses, making it ideal for foundries, shipyards, engineering workshops and construction sites. Turbo hose is oil resistant.

- Extremely low weight.
- Soft and flexible.
- Antistatic.
- Grinding and welding spatter resistant.
- Working temperature -30°C to +70°C.

TURBO 20	21	5/6	27	20	75	—	8.1	9093 0057 62

^a With a safety factor of 3 at 20°C.

^b The pressure drop will be 0.2 bar on a hose length of 5 m, including 2 nipples and at an inlet pressure of 7 bar.

RUBBER**DURABLE REINFORCED EXTRA THICK HEAVY DUTY RUBBER HOSE**

The hose withstands rough handling and is suitable for the most demanding tasks in construction, mining, shipyards, foundries etc. The inner lining is black EPDM rubber, conductive to dissipate static electricity. Reinforcement with high tensile strength made of synthetic textile yarns.

- Durable.
- Antistatic.
- Grinding and welding spatter resistant.
- Working temperature -25°C to +70°C.

^a With a safety factor of 5 at 20°C.

^b The pressure drop will be 0.2 bar on a hose length of 5 m, including 2 nipples and at an inlet pressure of 7 bar.

RUBAIR

DURABLE REINFORCED HEAVY DUTY RUBBER HOSE

Rubair hose is double reinforced to fulfil all general heavy duty demands and is recommended for indoor and outdoor use. Rubair hose is oil resistant.

- Durable.
- Antistatic.
- Grinding and welding spatter resistant.
- Working temperature -20°C to +80°C.

Model	Hose inside dia		Hose outside dia mm	Max working pressure ^a bar	Max rec. air flow ^b l/s	Weight per 20 m coil		Ordering No.

^a With a safety factor of 5 at 20°C.

^b The pressure drop will be 0.2 bar on a hose length of 5 m, including 2 nipples and at an inlet pressure of 7 bar.

SPI**ELASTIC HOSE FOR VERTICAL AND HORIZONTAL APPLICATIONS**

SPI elastic spiral hose is ideal for air tools used at varying distances from a fixed air outlet. It is easily stretched and retracts immediately when released. When used with hand tools, its self-storage principle ensures that the hose is kept off the floor and out of the way of the operator. The SPI 1 and SPI 2 have ball bearing swivels fitted on the long hose side to allow 360° rotation. All spiral hoses, except the SPI4, are fitted with plastic spring guard. SPI is the ideal hose in combination with a balancer.

- Self-retractable.
- Light and flexible.
- Strong and durable.
- Tubing material: Polyurethane (100% PUR).
- Hardness: Shore A 98 +2.
- Colour: Blue.
- Working pressure: 8 bar at 23°C.
- Burst pressure: 25 bar at 23°C.
- Temperature range: -40°C to +70°C.

Productivity Kits

Productivity kits boost productivity, extend tool lifetime and ensure minimum pressure drop.

Each productivity kit includes ball valve, air preparation unit, and the couplings, hose and nipples needed for correct and safe installation of the tool.

Just choose the correct productivity kit based on the air flow requirement of the tool and whether the tool needs lubrication or not. You'll be surprised how much the productivity kit improves the performance of the tool.

- Improves the performance of the tool.
- Fast and easy installation.
- Extends tool lifetime.

PRODUCTIVITY KITS FOR SCREWDRIVERS, DRILLS AND GRINDERS

Model	Max air flow	Hose, 5 m	Coupling	Lubrication	Ordering No.
For small screwdrivers and small drills with 1/8" BSP air inlet

Pre-mounted Hose Kits and Whip Hoses

PRE-MOUNTED HOSE KITS

Atlas Copco SmartQIC hose kits provides an easy and safe way to choose the right hose and coupling combination for pneumatic tools.

Each kit is ready for immediate use without the need of assembly tools.

- Correct combination hose – coupling.
- Leak free hose connections.
- Plug & Play
- Each hose kit is provided with 2 extra Nips as shown in the picture and mentioned in the details.

HM LIGHT

The HM Light has a robust design with a high impact composite casing. The outlet slot is optimized to provide an ideal pull-out angle for the hose. The HM Light is recommended for small and medium screwdrivers, small and medium pulse tools, small drills, impact wrenches up to 1/2" size and riveting and chipping hammers.

- Snap-on, pivoting wall bracket.
- PVC/PUR hose.
- Hose end provided with pressed fitting and steel spiral hose protector (NPT and BSP).
- Hose easily replaced when needed.
- Drum with ball bearings on both sides.
- Working temperature: 0°C - +50°C.
- Inlet hose length: 1 m.

HM OPEN

The HM Open has an open composite casing, steel frame and 10 mm or 13 mm hose. HM Open is a reliable, medium sized hose reel recommended for screwdrivers, impact wrenches, pulse tools, drills, chipping and riveting hammers and grinders up 1000 W.

- Spatter resistant rubber hose.
- Outlet roller position can be adjusted through 120 degrees for optimal pull-out angle.
- Hose end provided with steel spiral hose protector (NPT and BSP).
- Latch function is easily disengaged.
- Spring tension is easily adjusted.
- Floor, wall or ceiling mounting.
- Working temperature: -10°C - +60°C.
- Max working pressure: 15 bar.
- Inlet hose length: 1 m.

HM OPEN XL

Hose reels in the HM Open XL series have an open die cast aluminium casing and 3/8" or 1/2" hose. HM Open XL hose reels are recommended for screwdrivers, impact wrenches, pulse tools, drills, chipping and riveting hammers and high powered grinders.

- Spatter resistant rubber hose.
- Floor, wall or ceiling mounting.
- Revolving hinge for flexible use.
- Working temperature: -10°C - +60°C.
- Max working pressure: 15 bar.
- Inlet hose length: 1 m.

HM FLEX L

The HM FLEX L, with a steel casing and high quality rubber hose, handles both air and water. The HM FLEX L is recommended for all screwdrivers, pulse tools, impact wrenches, drills, chipping and riveting hammers and grinders up to 1000 W.

- NBR rubber hose.
- Movable brackets for floor, wall and ceiling mounting.
- High flow capacity.
- Working temperature: -30°C - +60°C.
- Max working pressure is 15 bar.
- Inlet hose length: 1 m.

RIL BALANCER

RIL balancers always keep the tool in place, handy and easily accessible. RIL balancers are available as retractors or weightless positioning balancers.

Safety chain included with all RIL balancers.

RIL RETRACTORS

- Adjustable wire stop.
- High quality spring and construction.
- Load range 0 to 10 kg.

HOSE REEL BALANCER – HRIL

Models in the HRIL range of hose reel balancers are specifically designed for use with small pneumatic hand tools.

The integrated air hose and support cable ensure the work area is kept tidy and the tool is easy to control.

- Ergonomics – The retraction force over hose travel remains almost constant which minimizes load on the operator and ensures smooth operation.
- An easily adjusted rubber stop is fitted on the hose which allows the tool to be set at the optimum position.
- The retraction force is easily ad.

BLOW GUN BG-SERIES

Atlas Copco blow guns BG-series are hard wearing, user friendly solution for all cleaning applications. The plastic body offer flexibility in handling for both left and right handed users, it insulate against cold and it reduce the risk of scratches to worksurfaces. The blow gun has excellent throtteling properties allowing easy regulation of the air flow. The blow guns have air inlet thread in brass that is fully covered by the plastic body. Two versions available with star tip to reduce risk of damages or injuries if the tube is pressed against workpiece or skin.

- High flow capacity.
- Suspension.
- Plastic body to avoid scratches.
- Air inlet thread in brass.
- Star tip availability for improved safety.
- Complies with OSHA STD1-13.1 and OSHA 1910.95.

Model	Version	Working pressure bar	Air flow l/s	Weight		Air inlet thread BSP	Ordering No.
				kg	lb		
BG 2603-HF	Long tube, high flow	6.3	7.5	0.13	0.29	1/4	8202 1006 04
BG 2604-SHF	Short tube	6.3	4.3	0.12	0.26	1/4	8202 1006 05
BG 2605-STSS	Short tube, star tip	6.3	6.6	0.12	0.26	1/4	8202 1006 06
BG 2606-STS	Long tube, star tip, silencer	6.3	6.3	0.14	0.31	1/4	8202 1006 07

Test Equipment

PRESSURE CONTROL UNIT

The unit consists of a high quality pressure gauge and the necessary couplings for checking the air pressure at the air inlet of the machine.

Ordering No. 4145 0699 81.

Atlas Copco air motors

Air motors from Atlas Copco – the reliable, cost-effective solution when applying power to rotating machines. Consider the air motor features and characteristics giving large benefits to the designer.

AIR MOTOR FEATURES AND CHARACTERISTICS

- Leading the industry in development and innovation.
- Offering a comprehensive range of standard air motors.
- A premier supplier of air motors engineered to meet customer requirements.
- Delivering orders, on time, to customer schedules.
- Offering a truly worldwide service.

in the chemical industry where the atmosphere as such is corrosive.

Atlas Copco's stainless steel motors have a "clean" design. Their smooth surfaces are cylindrical with no pockets where dirt can collect. The motors are easy to clean. The motors have double seals in Viton at the output shaft to prevent dirt and liquids from entering the motor gears. The seals also prevent the gear lubricant from leaking out. All external parts, including the output shaft, are made of stainless steel. The grease in the motor complies with NSF H1 and FDA 21CFR § 178.3570. For applications where there might be moisture in the compressed air the stainless steel LZB-motors can be equipped with a stainless steel motor cell as an option. With this option the motor becomes 100% stainless, both internal and external.

Customized air motors to your individual specifications

Whatever the requirement, Atlas Copco is always happy to help customers find solutions to their special needs. For OEMs, for instance, a customized air motor can be the most efficient solution when integrating an air motor into a machine or a tool. Special motors may have unique casings or mounting arrangements. They may utilize non-standard materials or surface coatings and be designed to achieve a specific output.

FEATURES FOR LZB MOTORS

Lubrication-free air motors

Equipped with low friction vanes and sealed bearings the lubrication-free motors release no lubricants into the air. They offer a viable drive solution for applications where oil mist must be avoided. For normal operations lubrication can still be used.

Stainless steel air motors for harsh and aggressive environments

Atlas Copco's stainless steel motors enlarge the field of applications to areas where the environment is corrosive. This can be in the food processing industries where corrosive detergents are used or

High torque air motors when a real workhorse is needed

Fitted with extra strong planetary gears the high torque air motors provide torques up to 680 Nm. The gears are dimensioned to stand being loaded at full stall torque indefinitely. Despite their strength the high torque air motors are compact compared to solutions with helical or worm gears. Lubrication-free versions are also available.

CERTIFIED VERSIONS

Our air motors are available with certification as standard, in compliance with the European Union's ATEX Directive on equipment for potentially explosive environments.

LZB RANGE**0.1 – 2.80 KW**

LZB Atlas Copco vane motors are compact, lightweight, and energy efficient. They are available in a variety of gear ratios to meet a large range of speed and torque requirements. They are particularly suitable for building into hand held machines, or indeed any industrial equipment.

Model	Max output		Speed range at max output		Torque range at max output		Min start torque range		Free speed r/min	No. of gear ratios	Motor diameter mm in
	kW	hp	r/min	Nm	ft lb	Nm	ft lb				
Non-reversible											
LZB14	0.16	0.21	320-9100	0.17-4.8	0.13-3.5	0.23-8.5	0.17-6.27	700-19500	5	27	1.1
LZB22	0.27	0.36	210-9600	0.27-11.8	0.20-8.7	0.32-22	0.24-16.2	480-21500	7	36	1.4

LZB46	0.63	0.84	20-8500	0.71-287	0.52-212	0.96-388	0.71-286	35-15800	12	46	1.8
LZB54	0.82	1.10	47-6800	1.15-161	0.85-119	1.40-207	1.03-153	90-12000	10	60	2.4
LZB66	1.46	1.96	50-7500	1.9-259	1.4-191	2.4-337	1.8-249	90-13500	10	60	2.4
LZB77	2.40	3.22	80-1280	18-274	13.3-202	24-374	18-276	155-2300	7	100	3.9

The LZB14, LZB22 and LZB33 models are available in lubrication-free versions. LZB14, LZB22 and LZB33 can be obtained in a stainless steel version. The standard non-reversible motors have clockwise rotation but can also be obtained with anti-clockwise rotation.

LZL RANGE**1.05 – 5.2 KW**

LZL Atlas Copco vane motors are designed to give outstanding starting characteristics, and low speed performance. The range is rugged and constructed for a long service life. With proven design, the LZL has been the machine tool builder's choice for decades.

Model	Torque at 3000 r/min		Power at 3000 r/min		Stall torque		Air consumption at 3000 r/min ^a		Max allowed speed r/min	Weight kg	Weight lb
	Nm	ft lb	kW	hp	Nm	ft lb	l/s	cfm			
LZL03 M	1.3	0.95	0.41	0.55	3.3	2.4	16	34	3000	2.9	6.4
LZL05 M	2.0	1.5	0.63	0.84	5.8	4.3	25	52	3000	3.9	8.6

^aNote that the air consumption in a typical mixing application normally is less than 50% of the values in the table

LZL 03/05 available with IEC and Nema flange. LZL05 also available in stainless steel.

^aNot ATEX certified.

Customized air motors to your individual specifications

Whatever the requirement, Atlas Copco is always happy to help customers find solutions to their special needs. For OEMs, for instance, a customized air motor can be the most efficient solution when integrating an air motor into a machine or tool.

Special motors may have unique casings or mounting arrangements. They may utilize non-standard materials or surface coatings and be designed to achieve a specific output.

SELECT YOUR AIR MOTOR WITH OUR WEB BASED MOTOR SELECTION PROGRAM

Use the web based Air Motor Selection tool to choose the correct motor for your application.

The designer specifies the required torques and speed of the motor and within seconds the program chooses the optimum motor. It also supplies complete documentation with performance curves and motor data.

Visit <https://webbox.atlascopco.com/air-motor/> to access the program.

AIR MOTOR DRAWING LIBRARY

CAD-drawings of any of the hundreds of different Atlas Copco air motors are available to designers, just download (in both 2D and 3D formats) via Internet from Atlas Copco Drawing Library. These CAD-drawings can then be quickly and easily inserted into the designer's machine drawing.

WHEN MORE INFORMATION IS REQUIRED

For further information on Atlas Copco vane motors please ask for a copy of our Air Motor catalogue or browse to our Links and Downloads section on www.atlascopco.com to download the catalogue.

Service solutions at Atlas Copco

Every production line and industrial site is unique and has its own challenges.

With that in mind, our service solutions are designed to help you get the most out of your industrial equipment. We combine analyses of production data with know-how and expertise in order to enhance your productivity and quality; while keeping you cost efficiency maintenance under control.

Our service offering consists of various services and options to further customise your maintenance agreement and fit your needs:

OPTIMIZATION

START-UP

EasyStart

Start-up

Starting a new operation requires meticulous planning, investment and training. Getting started quickly and smoothly ensures you're delivering value from the first day. Our start-up service solutions ensure that customers equipment is 'right first time', whilst also ensuring it delivers the optimum quality level and cost efficiency.

Maintenance

Atlas Copco can manage your entire maintenance cycle, whilst supporting our customers with preventive maintenance programs. Our maintenance solutions help customers optimize performance, decrease production downtime, whilst ensuring the right quality of your products. All within a controlled maintenance cost.

Optimization

In your production, there are many factors which might affect the right performance of your equipment. Not only is the tooling important, but also the operator, materials, joint conditions and software. Through our optimization services, we offer the possibility to improve assembly processes whilst optimizing performance.

EasyStart

EasyStart offers a trouble-free and efficient start of operations for your tightening system.

Through a globally standardized and certified process for every step, from programming to training, you will get it right the first time, saving time and money.

RapidRepair

RapidRepair, ensures damaged tools are quickly repaired and back in production with minimal administration, cost and inconvenience.

With a predefined, easy and practical process, we take full care of the whole repair cycle – with a leading turnaround time from door to door, because easy is both faster and less expensive.

ToolCover

ToolCover maintenance solutions help optimize performance and gain efficiencies in production, whilst minimizing tool costs and production risks.

With a modular set of products, ToolCover is designed to meet specific needs and tool usage.

ToolCover solutions are always:

- Reducing maintenance & Repair time
- Built on global best practice processes and service certificates
- Offered with a fixed Preventive Maintenance cost
- Coupled with discounts on spare parts

Calibration

With our network of calibration laboratories we offer a complete package of calibration services to help control quality for all assembly tools and measurement equipment in production.

The most efficient way to control quality:

- Traceability and document management.
- Calibration/verification of transducerized tools and controllers.
- Torque adjustment and capability test.
- Verification test for a specific application.
- Accredited and factory calibration of measurement equipment.
- Testing and calibration of click and torque wrenches.

TechCover Software Solutions

TechCover support solutions help protect production investment while optimizing production performance, quality and availability, whilst minimizing production risks.

With a modular set of products, TechCover is designed to meet your specific support requirements.

TechCover solutions are always:

- Reducing Resolution Times.
- Built on global best practice processes and support expertise.
- Offered with a fixed cost.
- Coupled with free access on software updates.

BASED ON YOUR NEEDS, YOU CAN CHOOSE BETWEEN PROTECT, STABILITY, UPTIME.

Please see below our value proposition

Production optimization

Zero fault production at the lowest total cost. Atlas Copco Service can help improve productivity within an existing assembly, or in a new production project.

We ensure that the focus remains on quality and efficiency from concept and R&D, through to full production:

- Joint analysis and optimization.
- Process optimization
- Program optimization

Training

Training provide your personnel with the capability to determine whether production issues and interruptions are the result of problems with the tooling or with the parts used in assembly.

Help raise productivity. Having well-trained operators, line engineers and quality people in your operations, means higher productivity and quality.

We have developed an extensive range of training courses that are provided locally through the Atlas Copco global network.

ResultScan

ResultScan reduces your risk of sending defective products to your customers. Thereby decreasing costs of warranty, rework and recall.

It identifies your application's optimal monitoring limits. Installing these limits enables you to identify cross threading, material problems and operational errors, before the customer does. It reduces your risk of sending defective products to customers. Thereby decreasing costs of warranty, rework and recall.

Tool Designations

BAL – Ball valve	LMV – Pneumatic nutrunner, stall type, angle model
BCP BL – Battery screwdriver, pistol grip, clutch type	LSF – Die grinder
BCV – Battery nutrunner, angle model, clutch type	LSK – Routers
CABLAIR – CABLAIR hose	LSO – Orbital sander
CLAW – Claw coupling	LSR – Straight grinder
COL – Colibri balancer	LSS – Vertical grinder and sander
COMBI – Pneumatic screwdriver, direct drive	LST – Random orbital sander
COMBI – Pistol grip drill	LSV – Angle grinder and sander
DIM – Air preparation unit, lubricator	LTC – Pneumatic nutrunner, shut-off type, crowfoot
DOS – Direct lubricator unit	LTD – Pneumatic nutrunner, shut-off type, straight model
EBL – Electric screwdriver, brushless clutch type	LTO – Pneumatic nutrunner, shut-off type, tube nut
EP C/X/XS – Hydraulic impulse nutrunner, non shut-off, ERGOPULSE	LTP – Pneumatic nutrunner, shut-off type, pistol grip
EP PTI/PTS/PTX – Hydraulic impulse nutrunner, shut-off, ERGOPULSE	LTV – Pneumatic nutrunner/screwdriver, shut-off angle model
ErgoNIP – Nipple	LUD – Pneumatic screwdriver, direct drive
ErgoQIC – Quick coupling	LUF – Pneumatic screwdriver, slip-clutch
ETC ST – Electric nutrunner, shut-off type, crowfoot, TENSOR ST	LUM – Pneumatic screwdriver, shut-off clutch
ETC STB – Battery nutrunner, crowfoot, TENSOR STB	LZB – Small vane air motor
ETD ES – Electric nutrunner, shut-off type, straight model, TENSOR ES	LZL – Vane air motor
ETD M – Electric screwdriver, hand-held "Digitork", MicroTorque	MRTT-B – Screwdriver for low torque applications
ETD SL – Electric screwdriver, straight model, TENSOR SL	MT TH – Torque In/Line rotary transducer
ETD ST – Electric nutrunner, shut-off type, straight model, TENSOR ST	MT TR – Torque&Angle In/Line rotary transducer
ETD STR – Electric screwdriver, straight model, TENSOR STR	MT TRA – Stationary torque transducer
ETF M – Electric screwdriver, fixtured "Digitork", MicroTorque	MT TS – Manual screwdriver torque transducer
ETF MT – Electric screwdriver, fixtured transducerized, MicroTorque	MultiFlex – Swivel connectors
ETF SL – Electric screwdriver, shut-off type, fixture, TENSOR SL	NIP – Nipple
ETO ST – Electric nutrunner, shut-off type, open end, TENSOR ST	Optimizer – Air tool oil
ETO STB – Battery nutrunner, tube nut, TENSOR STB	PFD – Power feed drills
ETP SB – Battery nutrunner, pistol grip TENSOR SB	POLUR – Polyurethane hose
ETP SL – Electric screwdriver, shut-off type, pistol grip, TENSOR SL	PVC – PVC hose
ETP STB – Battery nutrunner, pistol grip TENSOR STB	QIC – Quick coupling
ETP ST – Electric nutrunner, shut-off type, pistol grip, TENSOR ST	QRTT – Transducer for spindle and fixtured tool calibration
ETP STR – Electric screwdriver, pistol grip, TENSOR STR	QST – Fixtured electric nutrunner, shut-off type
ETD ES – Electric nutrunner, shut-off type, angle model, TENSOR ES	RBB – Bucking bar, vibration damped
ETV SB – Battery nutrunner, angle model, TENSOR SB	REG – Air preparation unit, regulator
ETV SL – Electric screwdriver, angle model, TENSOR SL	RIL – Balancer
ETV ST – Electric nutrunner, shut-off type, angle model, TENSOR ST	RRC – Chipping hammer, conventional type
ETV STR – Electric screwdriver, angle model, TENSOR STR	RRD – Chipping hammer, vibration damped
ETV STB – Battery nutrunner, angle model, TENSOR STB	RRF – Chipping hammer, vibration damped
ETX – Fixtured electric nutrunner, shut-off type	RRH – Riveting hammers, vibration damped
FIL – Air preparation unit, filter	RRN – Riveting hammer, conventional type
GHP – Torque arm, MicroTorque	RTP – Pneumatic nutrunner, pistol grip
GTG – Turbo grinder	RUBAIR – Rubber hose
GTR – Straight turbo grinder	RVM – Scaler, vibration damped
GUN – Blow gun	SM – Torque arm, parallel
HM – Hose reel	SMC – Carbon arm
HRIL – Hose reel	SML – Torque arm, linear
HT – Torque testers	SPI – Spiral hose
IRTT-B – In-line rotary torque and torque/angle transducer	SMS – Torque arm, linear
JSB – Joint Simulator Bench	SRB – Battery nutrunner
LBB – Pistol grip and straight drill	SRTT-B – Static reaction torque transducer
LBD M – Modular drill, straight model	SRTT-L – Transducer for STanalyser
LBR – Pneumatic nutrunner, stall type, ratchet wrenches	STB – Static Transducer Bench
LBS – Micro stop drill	TBP – Battery nutrunner
LBV – Angle drill	TPS – Tool Positioning System
LBP M – Modular drills, pistol model	TT – Torque testers
LCS – Circular cutters	TURBO – Rubber hose
LGB – Tapper	TWIST – Pneumatic screwdriver, slip-clutch
LMD – Pneumatic nutrunner, stall type, straight model	WP – Balancer
LMK – Pneumatic nutrunner, stall type, worm drive	
LMP – Pneumatic nutrunner, stall type, pistol grip	
LMS – Impact wrenches, non shut-off type
